Module Code & Module Title

CC4057NI Introduction to Information Systems

Assessment Weightage & Type

40% Individual Coursework

Year and Semester

2021-22 Spring

Student Name: Shishir Ghimire

Group: L1C15

London Met ID: 22015777

College ID: NP01CP4S220018

Assignment Due Date: 2022- 06-01

Assignment Submission Date: 2022-06-01

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a marks of zero will be awarded.

1. Introduction:

Our third coursework for this module is to develop an e-commerce website to sell various kinds of mobile and smartphones. I have developed an e-commerce mobile store named LOKI following the guidelines provided. My website contains many pages but mainly Home, Products, Blog, Research, and Contact us are the main attraction of my website. My website sells various kinds of smartphones ranging from mid-range to flagship. Various brands such as apple, Samsung, Vivo, Asus, and Xiaomi are available in my store.

Each web page of my site contains a navigation bar at the top and a footer bar at the bottom of the page to navigate throughout the website with ease. The main page of my website is the Home page. It consists of an image slider just below the navigation bar at the top which I developed using HTML and CSS. Then after that, it has a section that appeals to the customers to buy a specific phone with the help of attractive taglines. Then there is another section named your trusted brands which shows the customers that we have all the important and most selling brands smartphones on our website. After that, there is a section called our new additions which shows the latest phones in the market are also available in our store and this section consists of description section which shows the specification of the fresh phones. Then there is a section named as Benefits of joining us which displays the services which we provide and the special offers like free delivery which can attract the customers to take advantage of our offers. At last, there is a footer section that consists of the link to all the pages of our site and in the middle, there is a link that directs the customers to the privacy policies and terms and conditions of our store and website.

The second page of my website is the products page. This page includes an image banner just below the navigation bar. Then there is a section named Hot Picks which displays the current most selling products on our website which can motivate a customer to buy those products. There is the section for the apple brand which shows all the apple products available in the store and then similarly there are sections for the brand Xiaomi, Samsung, Asus, and Vivo. The third page of the website is the Blog page. On this page, I have written a blog on how technology has affected our daily life positively and

negatively. I have written this blog including various relatable images. The fourth page of my website is the Research page. On this page, I have shown the websites from which I have taken references to develop my website. The last page of my website is to contact us from where they can contact us in case of any faulty delivery or visit our physical store and can even give feedback to us on our services.

I have developed my website using HTML, CSS, and JavaScript. I have used HTML to build the fundamental building block of my web pages and to control the layout of my contents. HTML helped me to provide the structure for my web pages. On other hand, I applied CSS to style my webpages elements. I targeted various screen sizes to make my web pages responsive as well. CSS helped me to provide that look and feel to my website. I used JavaScript to make my website interactive with the customers. I added different functions and features to my website using JavaScript. (Ubah, 2021)

In my opinion, I have made a very decent and well-managed website. The main point for me is that I got an opportunity to learn more about web development through this coursework and it has boosted my confidence that this will help to make the future better. It helped me to enhance my skills more and taught me to develop an interactive website. Developing an interactive website is not easy work and the coursework like this is helping me to learn more.

2. Text editor – Virtual studio code

To develop the e-commerce website of my mobile store I used virtual studio code or popularly known as VS Code as my text editor as I have been using this software for a long time and VS Code is very handy to me for doing big tasks. Additionally, it provides so many features that help me to finish my work ahead of the given deadline. It was developed by Microsoft for Windows, Linux, and macOS. The main features that attract me most to this software are code refactoring, debugging, embedded Git, syntax highlighting, and Intelligent code completion. It can be used with various programming languages such as Node.js, Python, C++, Java, JavaScript, and so many on. (Wikipedia, 2022)

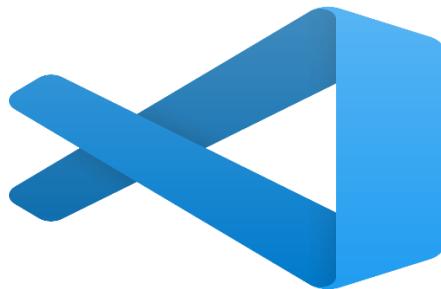

Figure 1: Virtual Studio Code logo

3. Balsamiq Wireframes for Wireframe Development:

Balsamiq is the graphical website wireframe developing application. It is used to develop the graphical layout or structure of the website which helps a developer to put his idea for the website first in this application and make a graphical wireframe that can help him while writing the codes for the website. I have used Balsamiq to build a digital sketch of my idea for my e-commerce website to make my understanding more clear about this project before writing codes for it. IT professionals use this because they say that this is the fastest, most focused, and low-fidelity tool for making wireframes. (Balsamiq, n.d.)

Figure 2: Balsamiq Wireframes Logo

4. About Webpages

4.1. Home:

The home page is the opening and the most important page of my website. As the first impression is so much important I had to make this page look attractive. Like every page, it consists of a navigation bar at the top and a footer bar at the bottom. After the navigation bar, there is an image slider of a total of four images that slide one by one in the infinite loop. I developed this image slider using HTML and CSS only. After the image slider, there is set of three phones with attractive taglines to appeal to the customer to buy those products. After that, there is a section that displays all the available brand in the store. All the brand logos are styled with hover effects to make them look to transform into bigger sizes. After that, there is another section named our latest editions which shows that the latest phones that are available in the market are also available in our store. This section also shows the features of that particular phone and also there are two buttons of which one is for learning more about that device and the button is to re-direct the customers to buying section. After that, there is another section named benefits of joining us which displays the user about our latest offers and discount which can motivate them to buy products from our store.

4.2. Wireframe of Home Page:

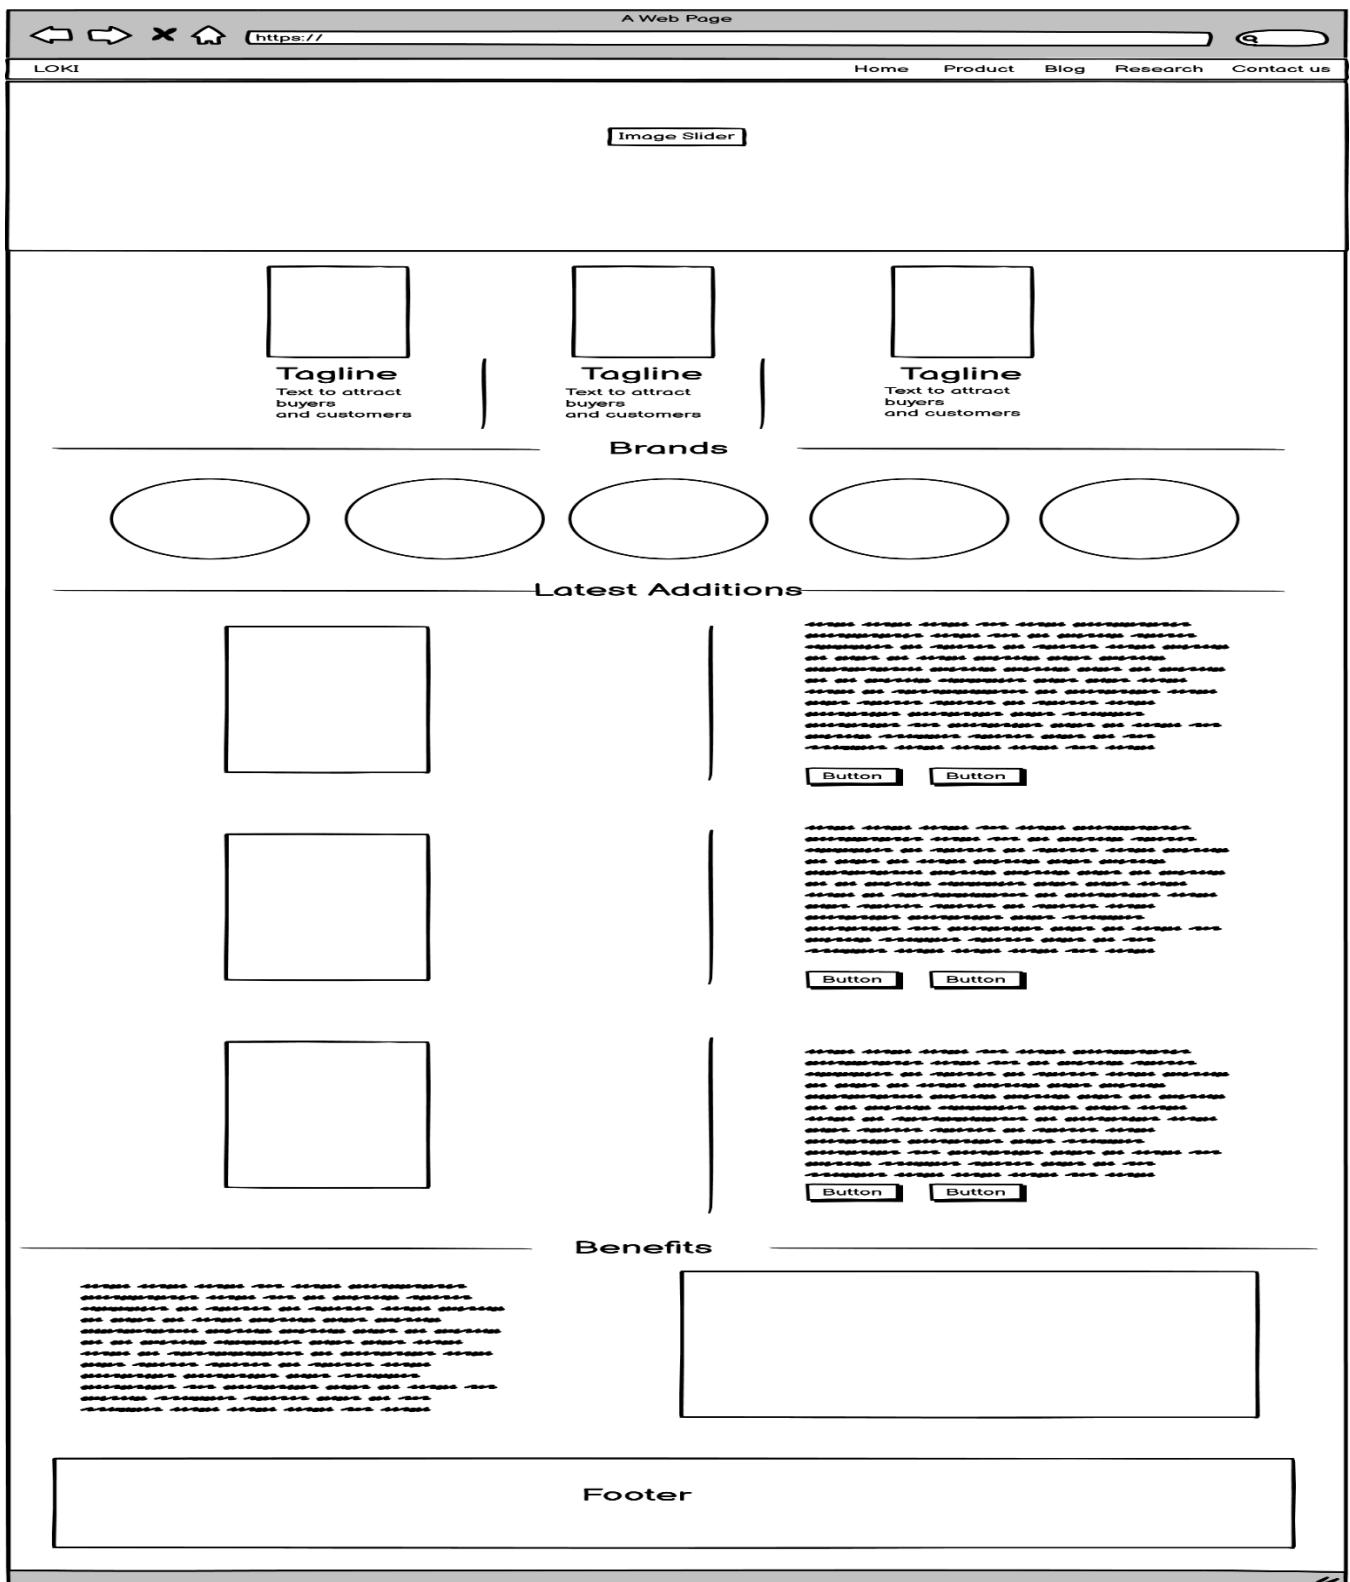

Figure 3:Wireframe of Home Page

4.3. Screenshots of the Home page:

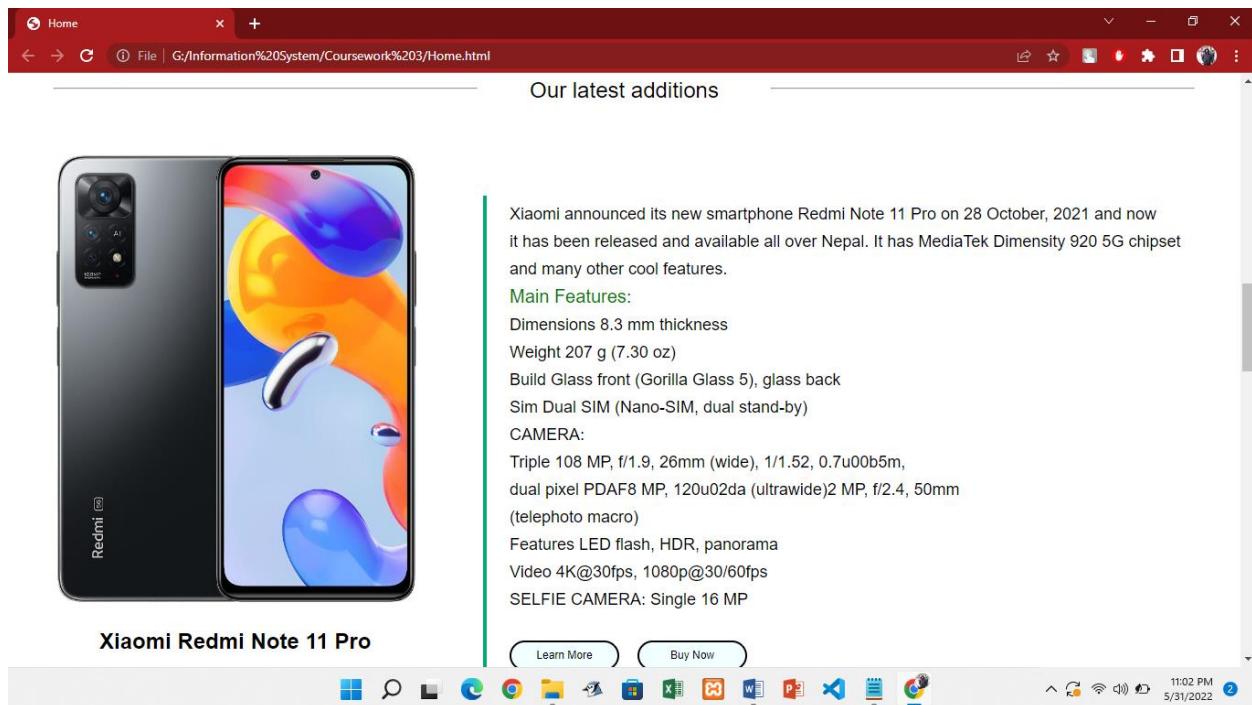

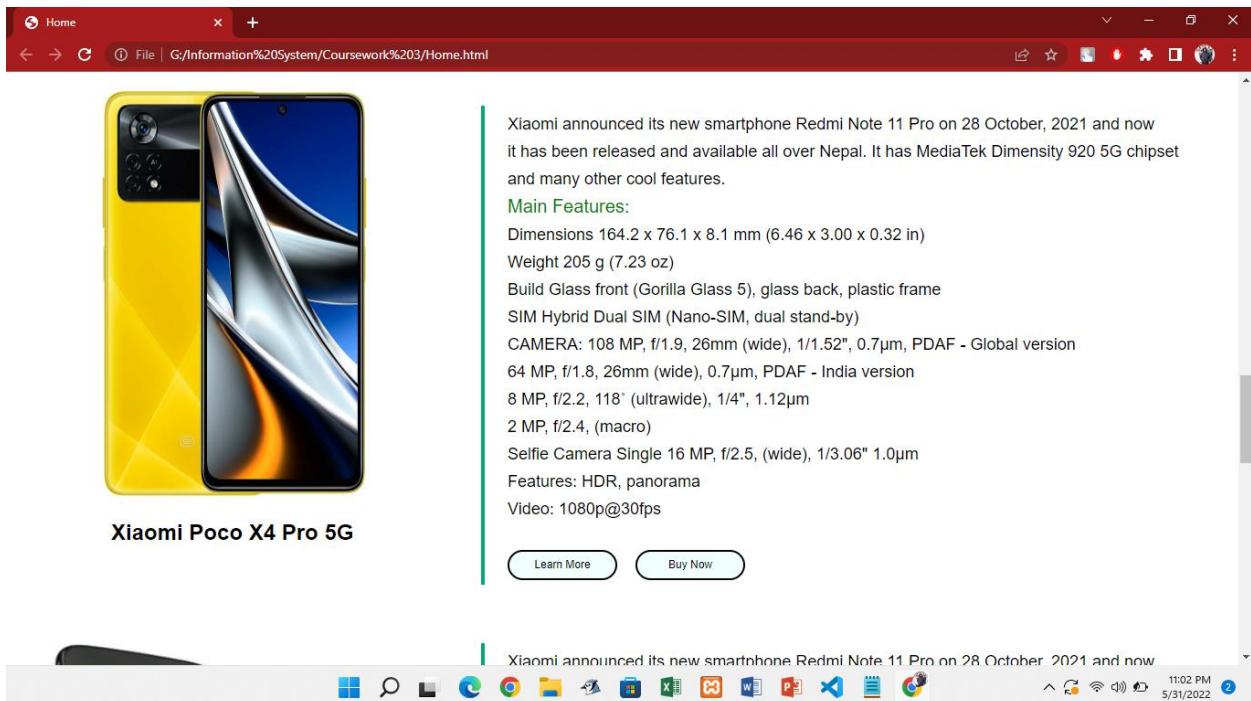

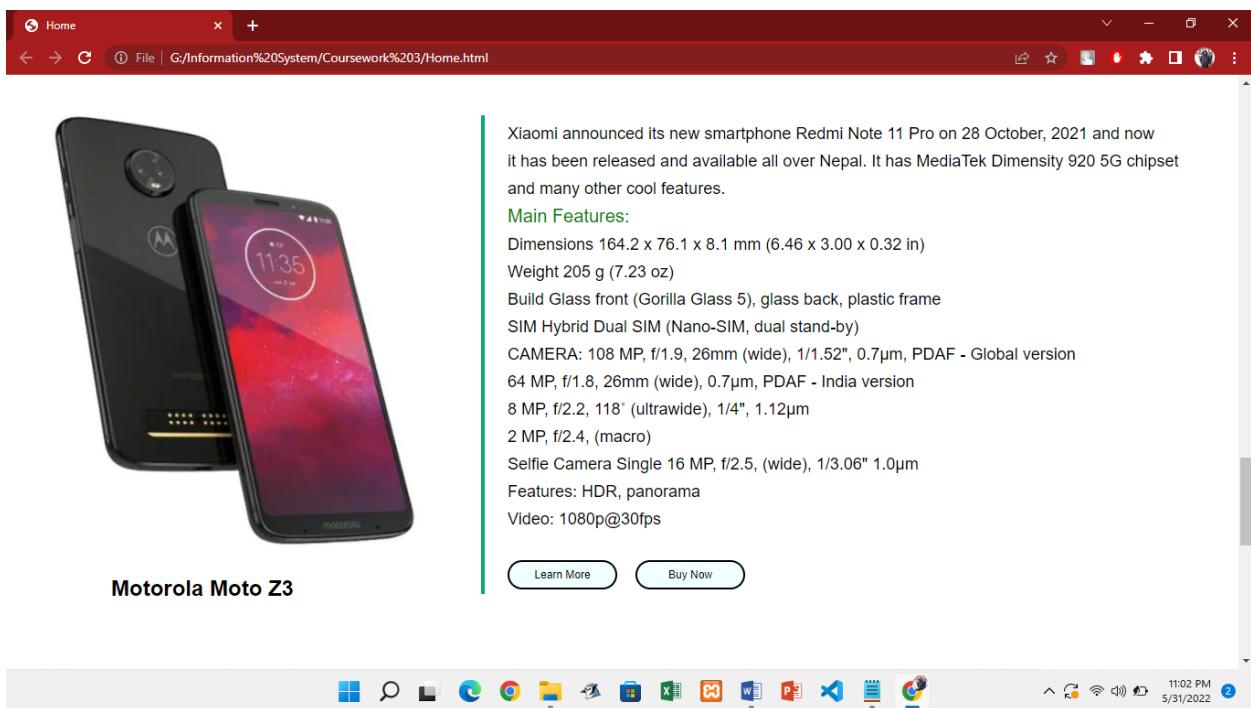

Figure 7: Screenshot of home page

**Figure 8: Screenshot of home page****Figure 9: Screenshot of home page**

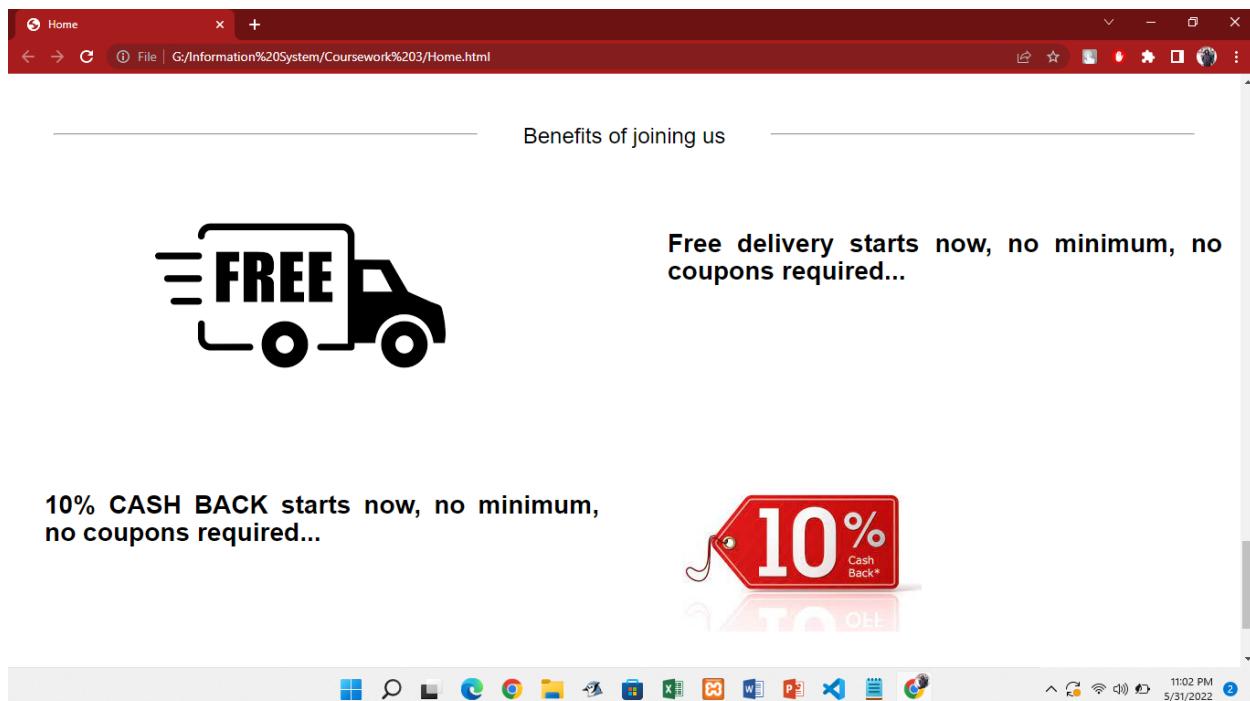

Figure 10: Screenshot of home page

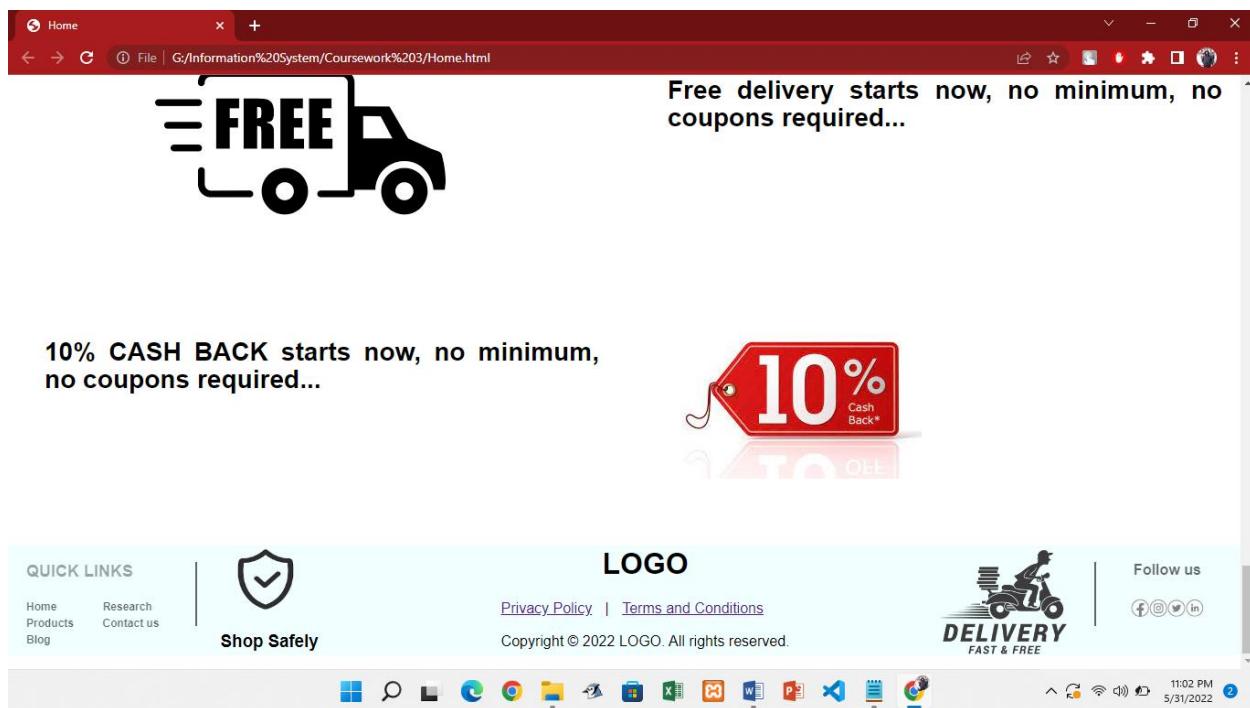

Figure 11: Screenshot of home page

4.4. Product:

This is the second page of my e-commerce website which is very important from a business perspective. The main function of this page is to sell the products from the store. Customers go through this page to buy their phones so this page must attract them for good reasons. First of all, it consists of a navigation bar at the top and a footer bar at the bottom. Then it has an image banner indicating that we have all the mobile accessories at our store. Then there is a section named hot picks which displays the most selling products of our store. The main objective of this section is to motivate customers to buy these products as they are the most selling products. Then there is a section for the apple brand. It consists of all the available iPhones with their prices. Below every phone, on this page, there are two buttons of which one is for each phone detail and another is to re-direct the customer to the buying section from where they can purchase that particular item. After apple, there are similar sections for other brands such as Samsung, Asus, Vivo, and Xiaomi which consist of available products of their respective brands.

After clicking on any of the buy now buttons it re-directs them to another page to buy that product. There they need to fill out a form to buy that particular button. They also need to select the payment option to buy their products. On that page, there is a back button on the left-most side at the top of the page. The main function of that button is to send back customers to the product page if they have changed their minds. The button is made to function like that using JavaScript. JavaScript is also used there to validate the filled form in that buying section.

Overall, this page is very functional and useful. It took most of my time to build this page and I am very happy with the outcome that I have developed.

4.5. Wireframe for the Product page:

**Figure 19: Screenshot of the product page****Figure 20: Screenshot of the product page**

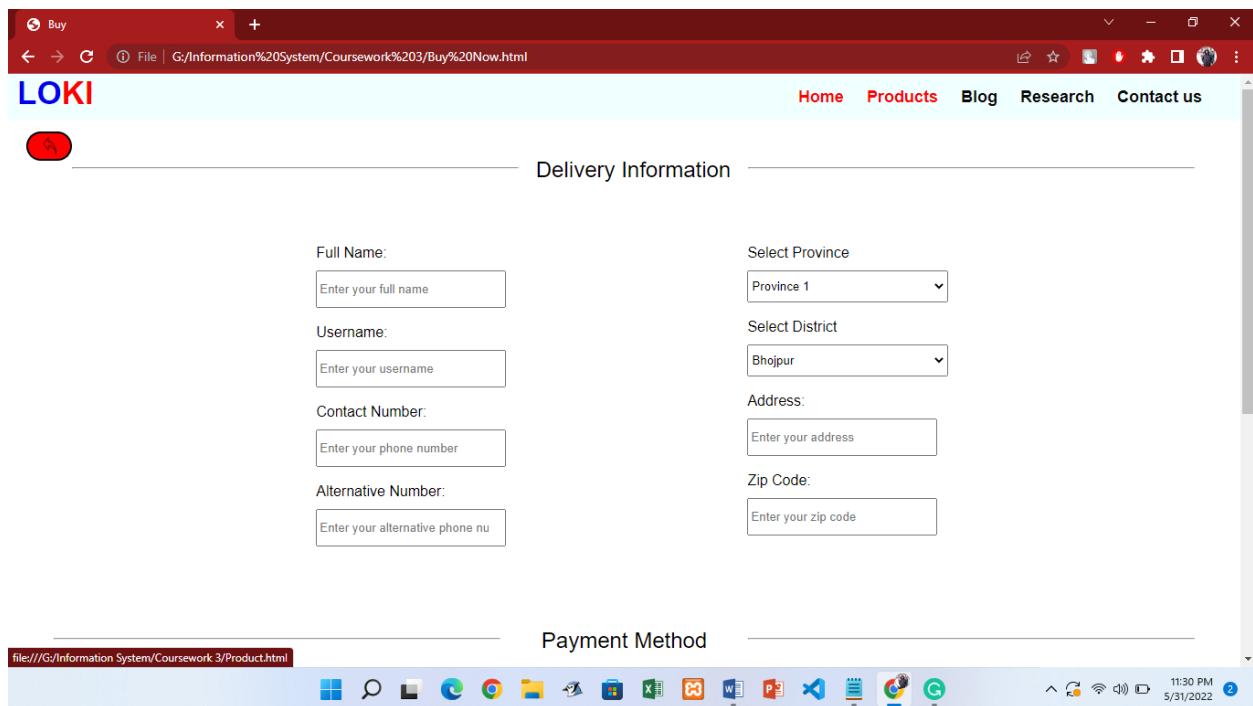

Figure 21: Screenshot of the buy now page

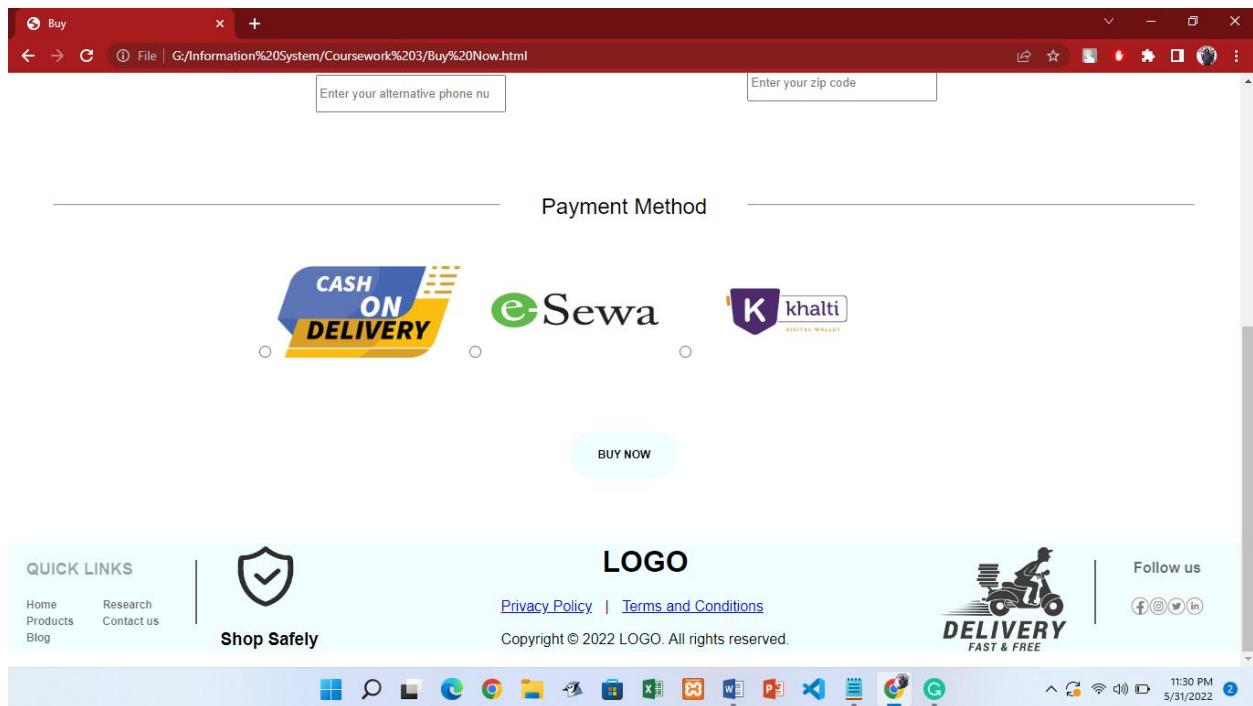

Figure 22: Screenshot of the buy now page

4.7. Blog page:

This is the third and one of the important pages of my website. This page consists of a full blog that I have written about How modern technology has affected our daily life. There are very reasonable and good arguments that I have included in my blog so it is worth reading the full content. I have divided the blog into various sections pointing out modern technology's merits and demerits. I have inserted various images in the blog which relate to its contents. At the top, there is the navigation bar and there is an image banner just below the navigation bar which gives the banner for the entire blog. At last, there is a footer section which consists of all the quick links to all the web pages, privacy policies, terms and conditions, and quick links to all the social media of our stores.

4.8. Wireframe of the Blog page:

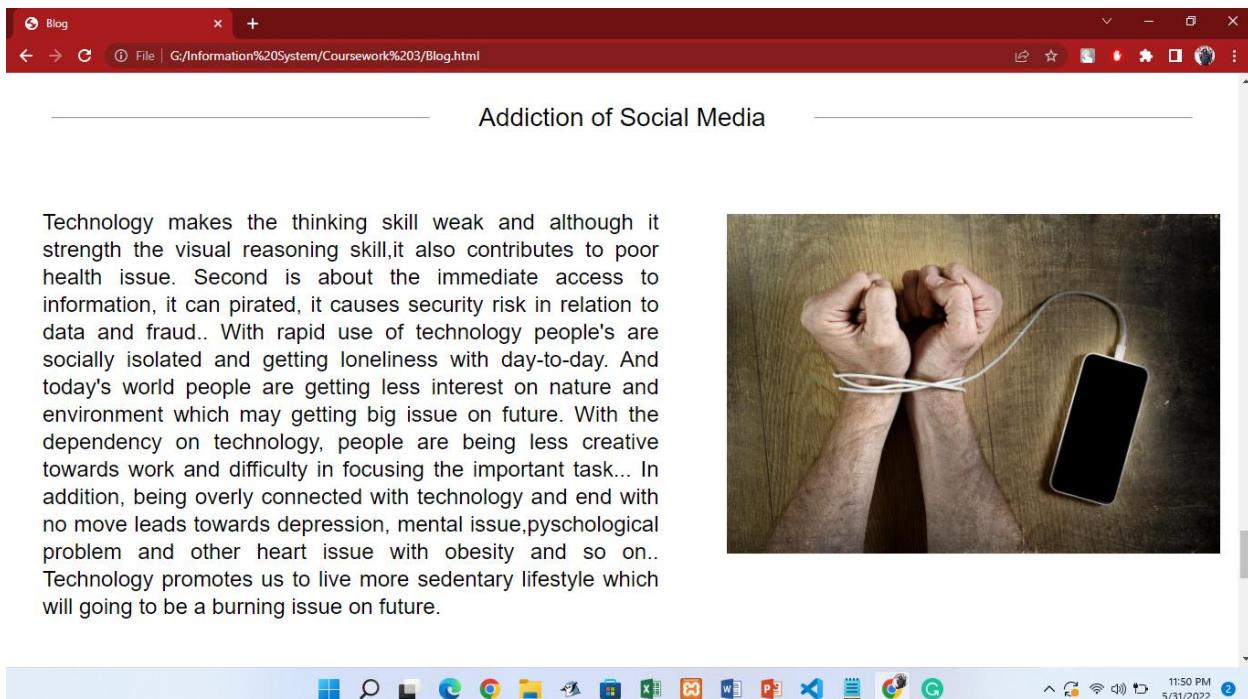

Figure 35: Screenshot of the Blog page

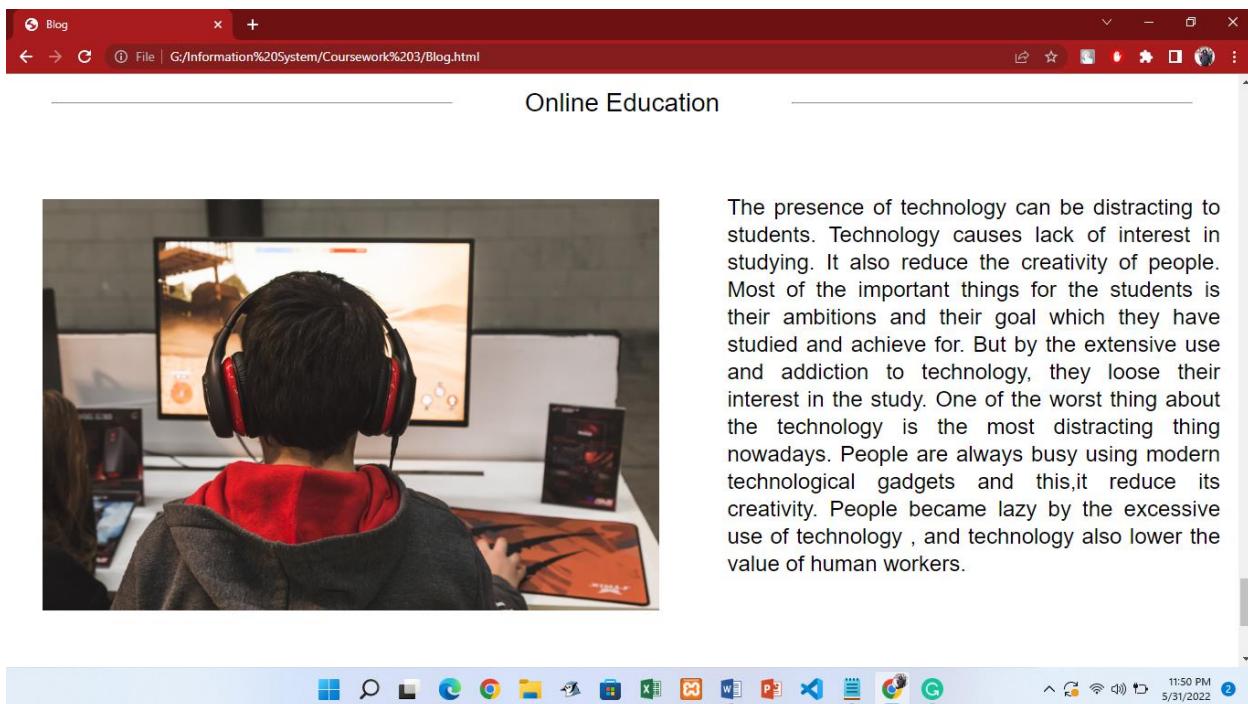

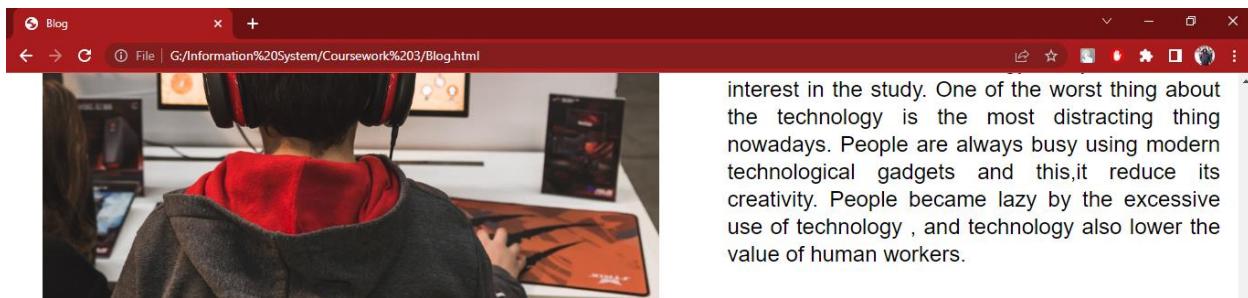

Figure 36: Screenshot of the Blog page

Conclusion

To sum up, I believe that the positive or negative effect of technology on world depends on the choices that people make.However,technology is a good servant but a bad master. Technology thus means the knowledge which enhances lifes.Several big and small things we do day-to day lives have been the outcome of technological development.

Figure 37: Screenshot of the Blog page

4.10. Research page:

This is the fourth page of my website and it is called the Research page. On this page, I have compared my websites with the three different websites from which I have taken some references and inspiration. I have compared my website sidewise and I have also described how and what content I have taken references and what are the changes I have put by myself. Some of the references were very important and some of them have brought a visible and huge change to my website. First of all, it consists of a navigation bar at the top then I have inserted an image slider which consists of five different images. I have developed this image slider using HTML, CSS, and also JavaScript. In the first image slider on the home page I hadn't used JavaScript but this time I learned how to do it and implemented it on this page. After that, there are three different comparison parts where I have compared my website with the other three different websites. At last, there is a footer section as usual.

4.11. Wireframe for the Research page:

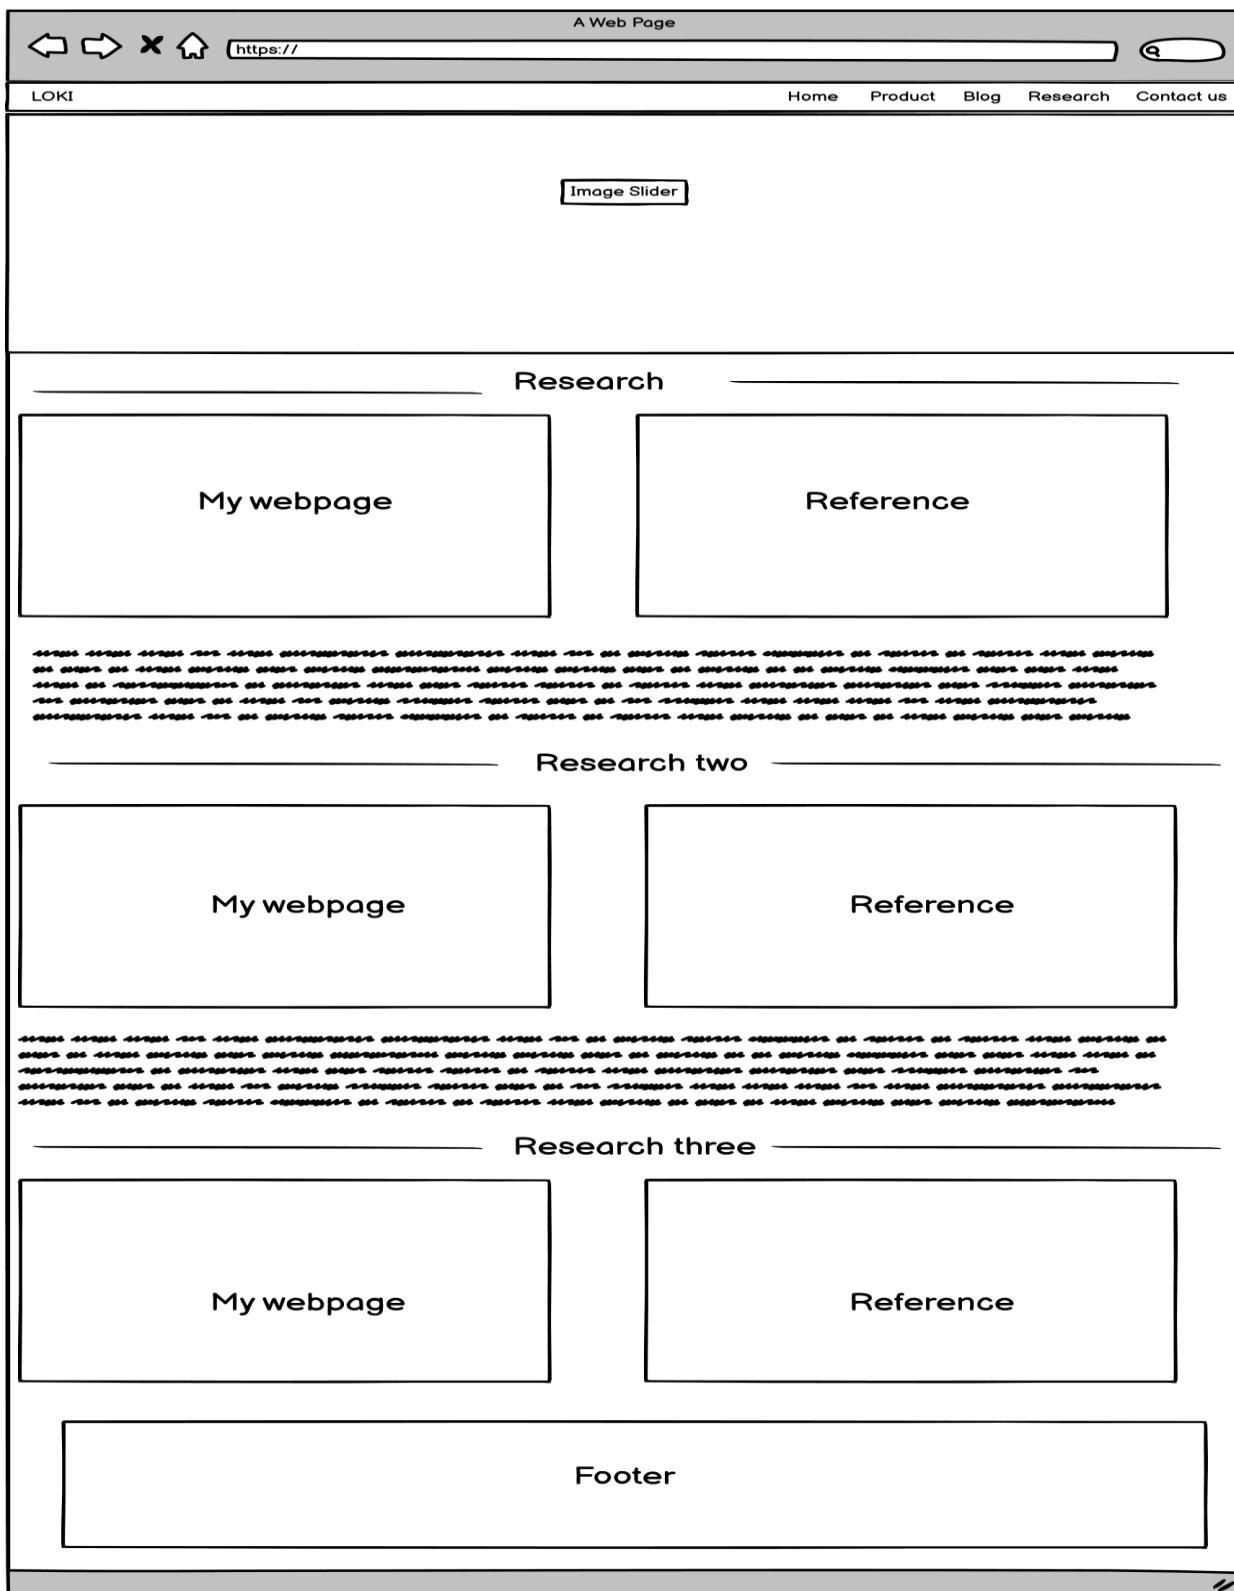

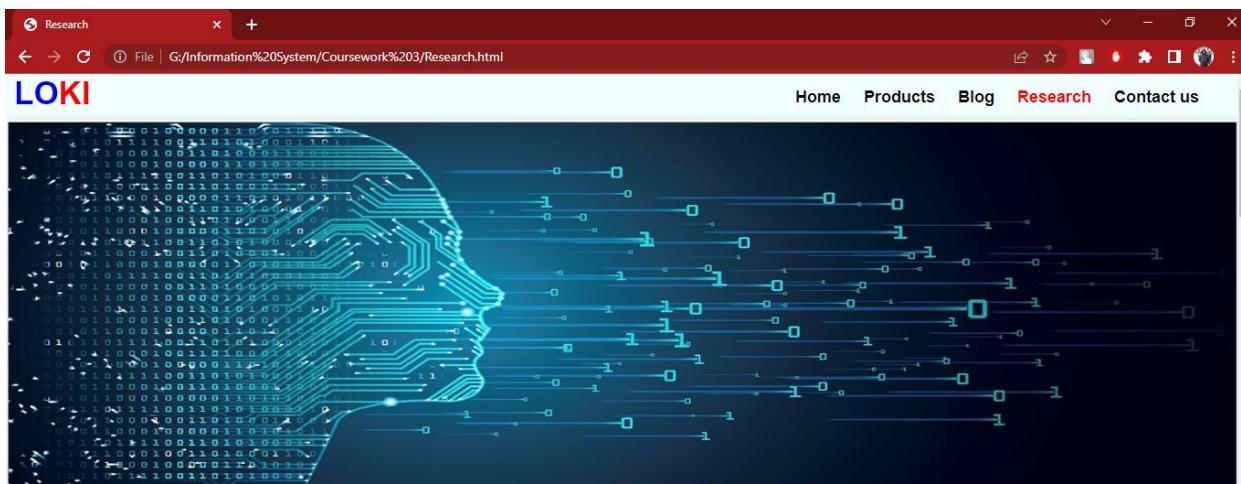

Figure 38: Wireframe of the research page

4.12. Screenshots of the Research page:

Research

In this webpage I have compared my website with the website from which I had took references while doing this course work.

Figure 39: Screenshot of the Research page

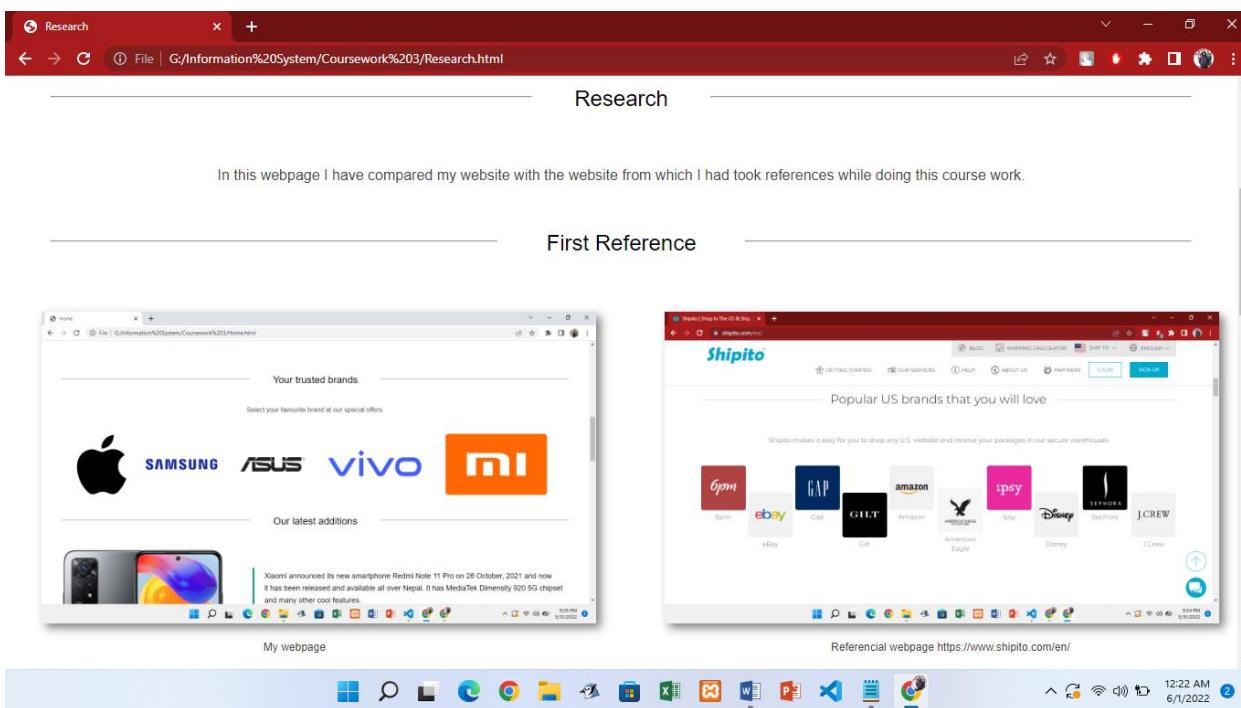

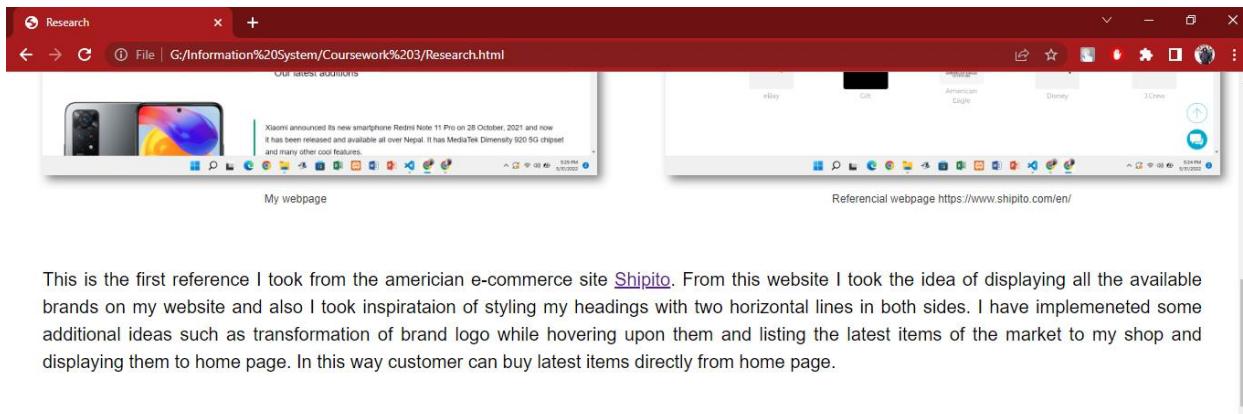

Figure 40: Screenshot of the Research page

This is the first reference I took from the american e-commerce site [Shipito](#). From this website I took the idea of displaying all the available brands on my website and also I took inspirataion of styling my headings with two horizontal lines in both sides. I have implemeneted some additional ideas such as transformation of brand logo while hovering upon them and listing the latest items of the market to my shop and displaying them to home page. In this way customer can buy latest items directly from home page.

Second Reference

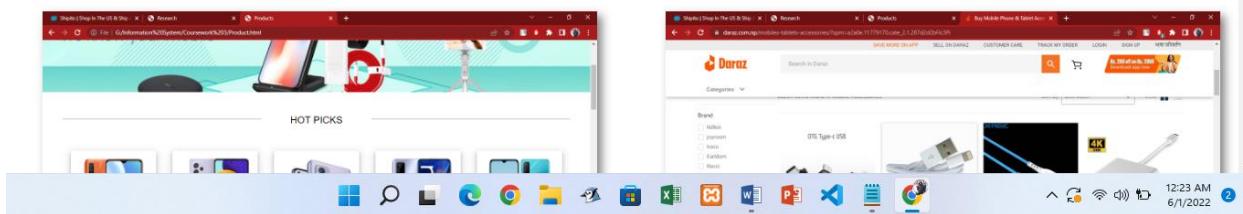

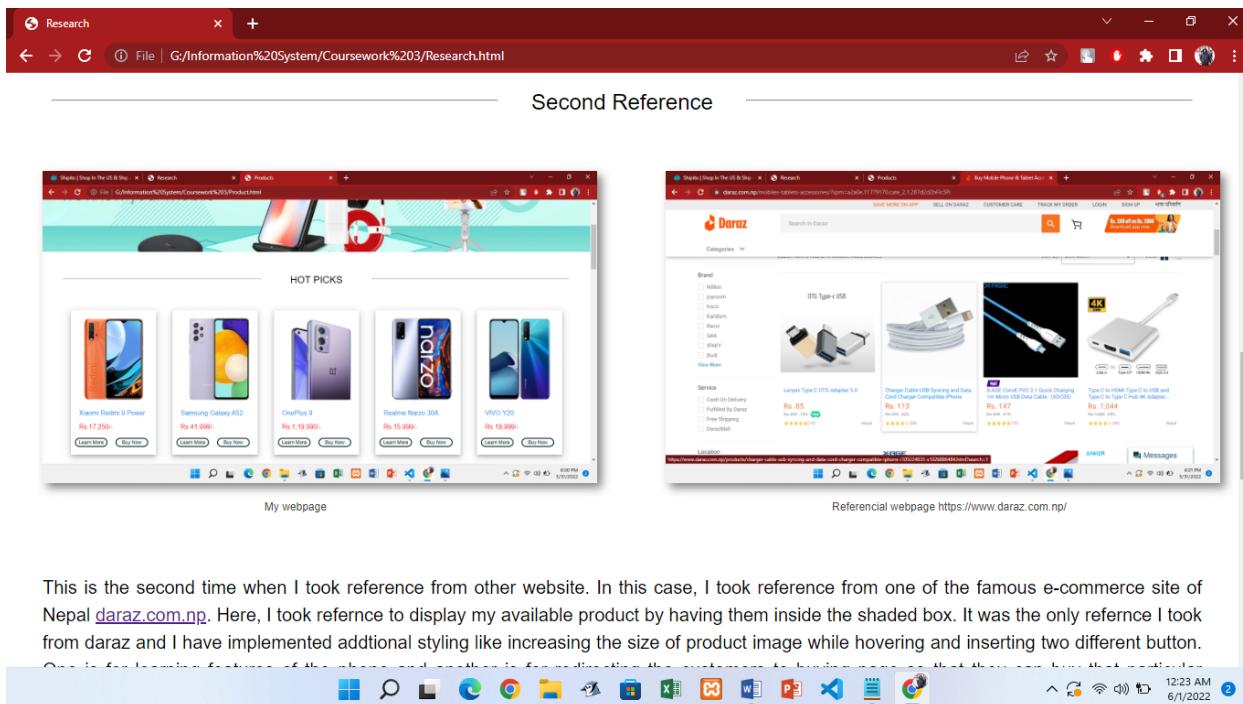

Figure 41: Screenshot of the Research page

This is the second time when I took reference from other website. In this case, I took reference from one of the famous e-commerce site of Nepal [daraz.com.np](#). Here, I took refernce to display my available product by having them inside the shaded box. It was the only refernce I took from daraz and I have implemented additional styling like increasing the size of product image while hovering and inserting two different button.

Figure 42: Screenshot of the Research page

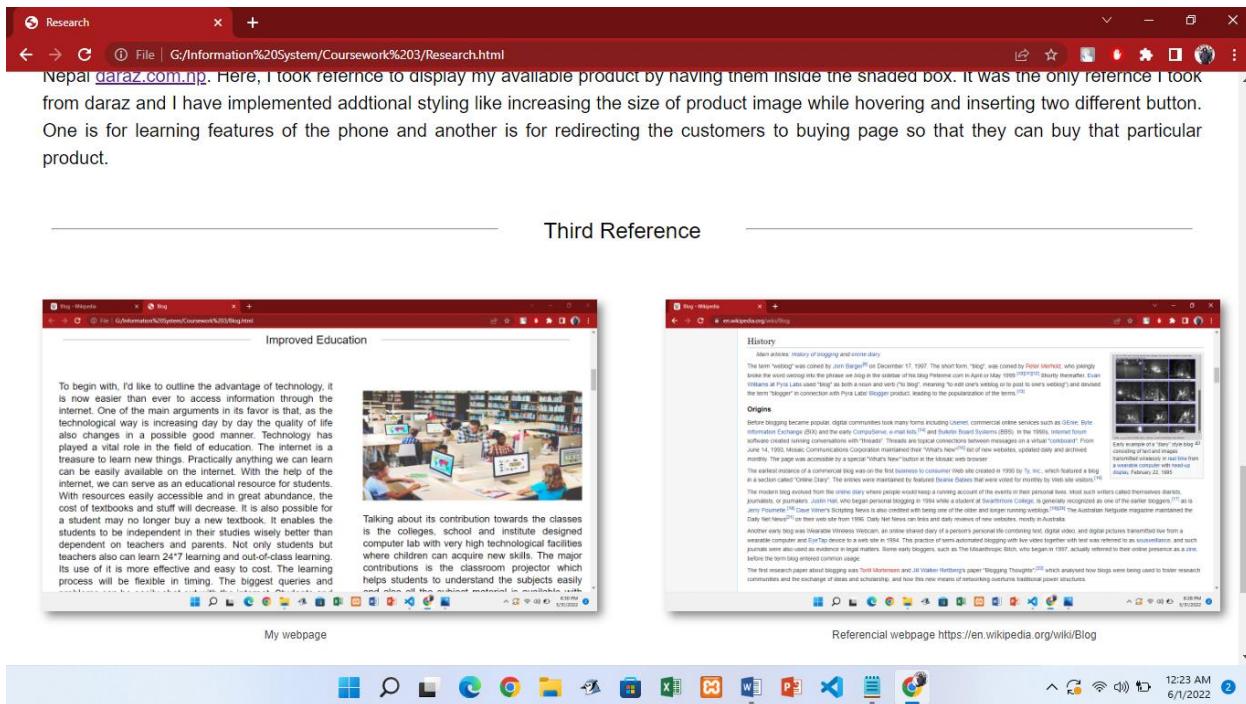

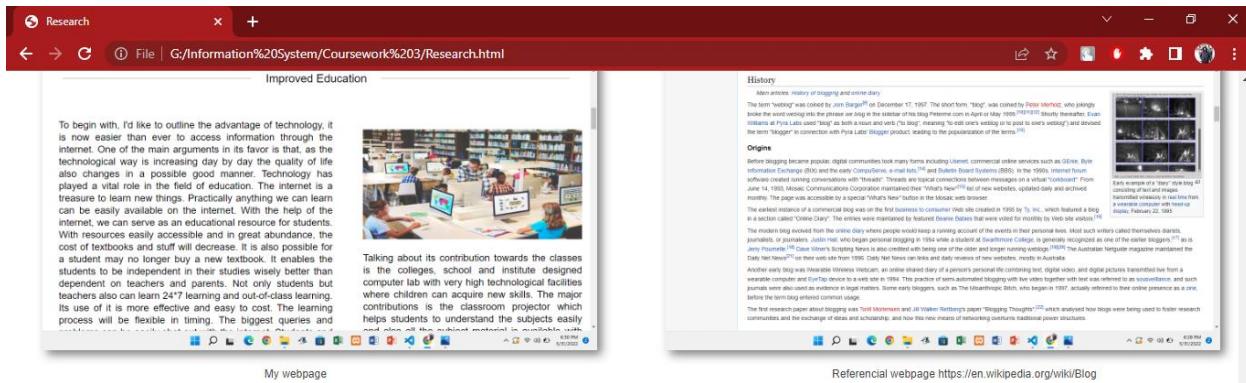

Figure 43: Screenshot of the Research page

This is the final time when I took reference from other page. This time I took the inspiration from [wikipedia](#). I was researching about how to write a proper blog then I came across wikipedia and then I thought it's a good idea to take reference from wikipedia itself as it has already a lot of blogs written on it. I took the reference of positioning the image while writing blog but theme is constant all over my website.

Figure 44: Screenshot of the Research page

4.13. Contact Us:

This is the last but one of the important webpage of my website. On this page, there is a system from which customers/users can directly contact an authorized person of the store. First of all, this webpage starts with the navigation bar at the top, and just below the navigation bar, there is the image banner displaying contact us. Then there is a section named feel free to contact us where on the left side there is an image that motivates the customers to engage with the store owner. On the right side, there is a form. This form is developed well with the validation feature from JavaScript. The form consists of a box where customers have to fill in their first and last name, their business email, contact number, and address. Then just below this section, there is another section named visit us here. This section consists of a google map of the location of the physical. By following the map customers can even go to the physical stores when in need. And like usual, there is a footer section at the bottom of the webpage.

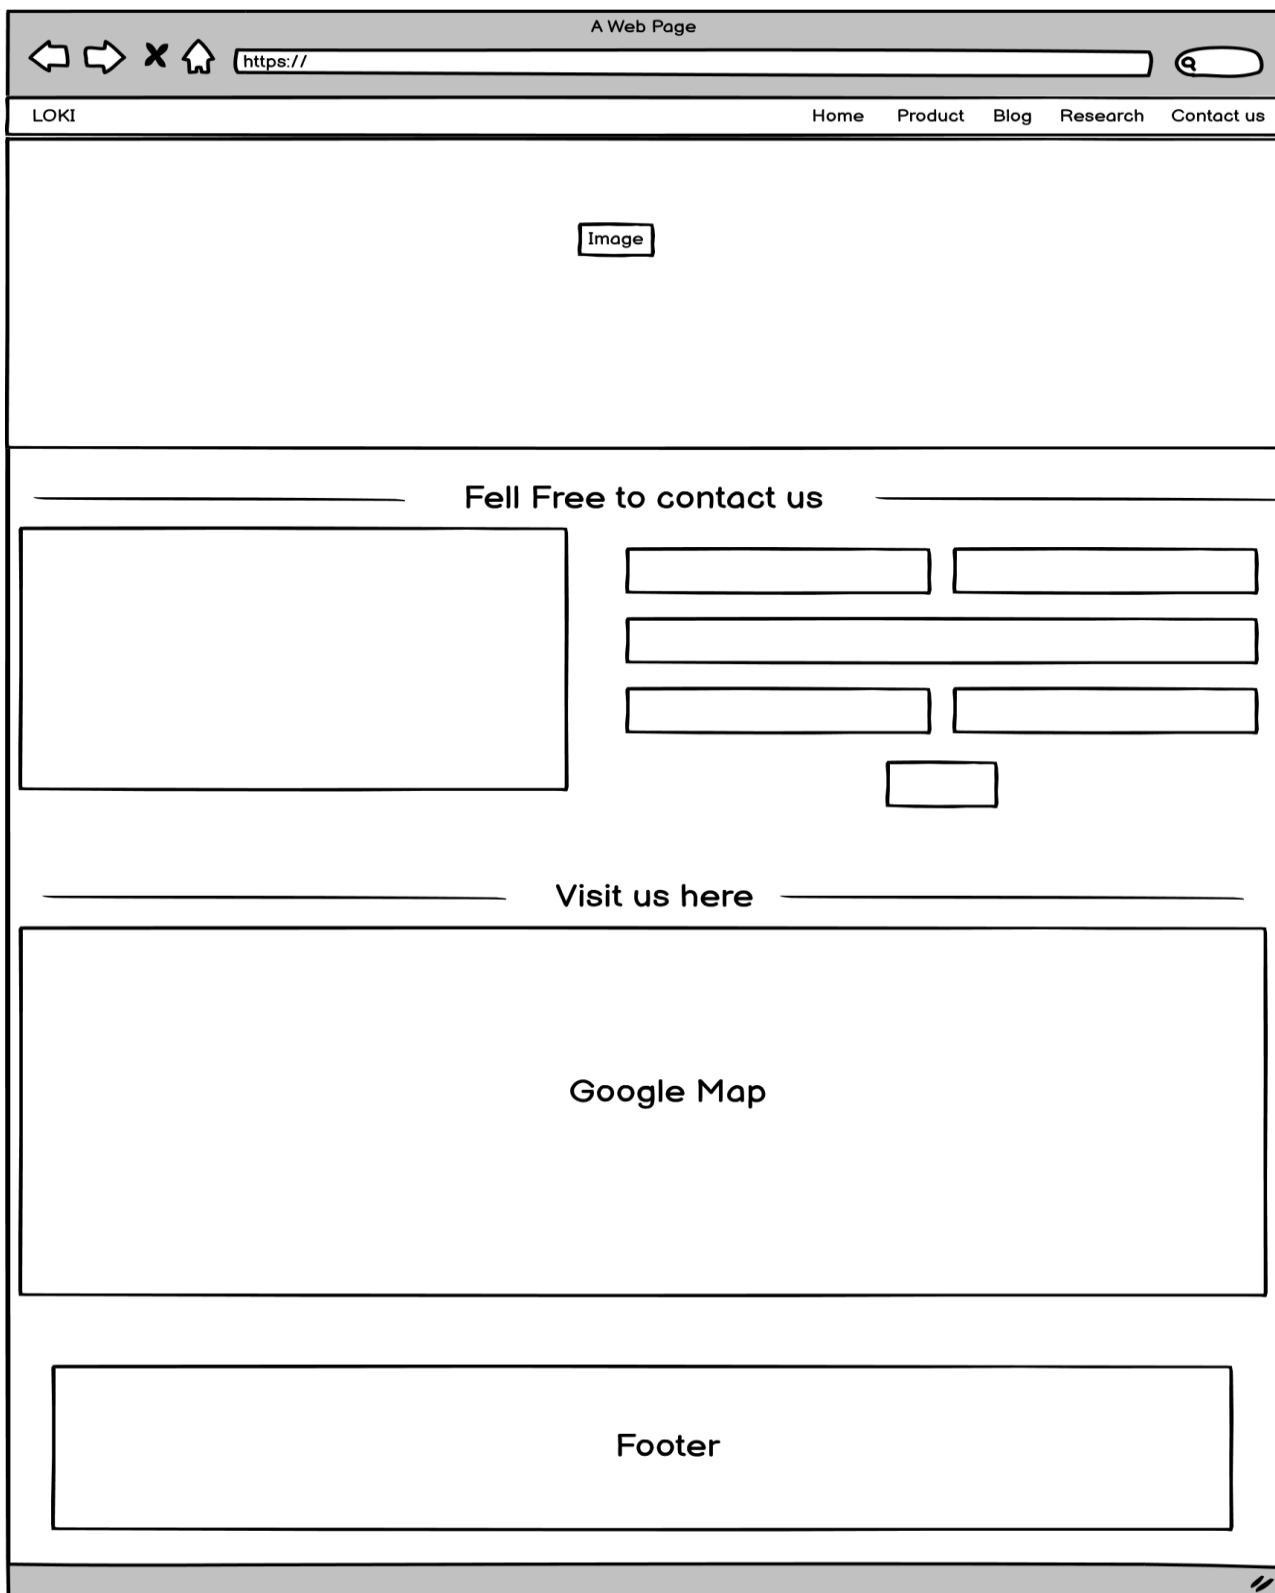

4.14. Wireframe of the Contact Us page:

Figure 45: Wireframe of the Contact Us page

4.15. Screenshots of the Contact Us Webpage:

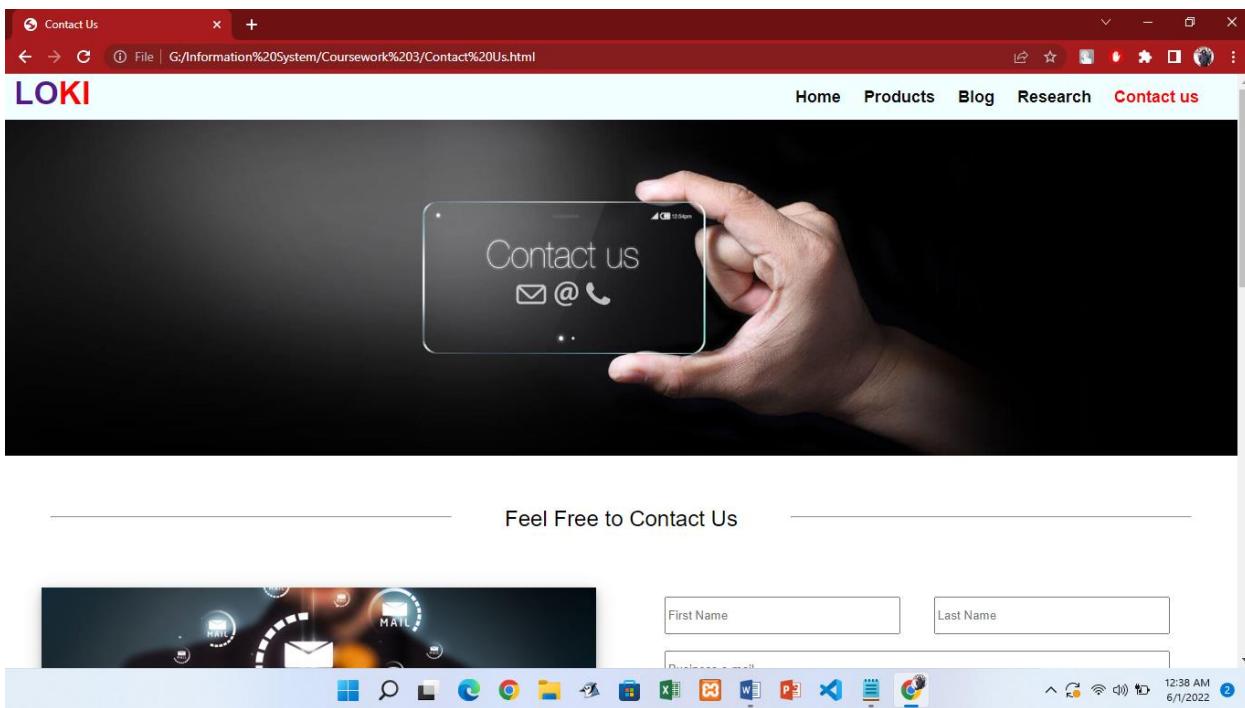

Figure 46: Screenshot of the Contact us page

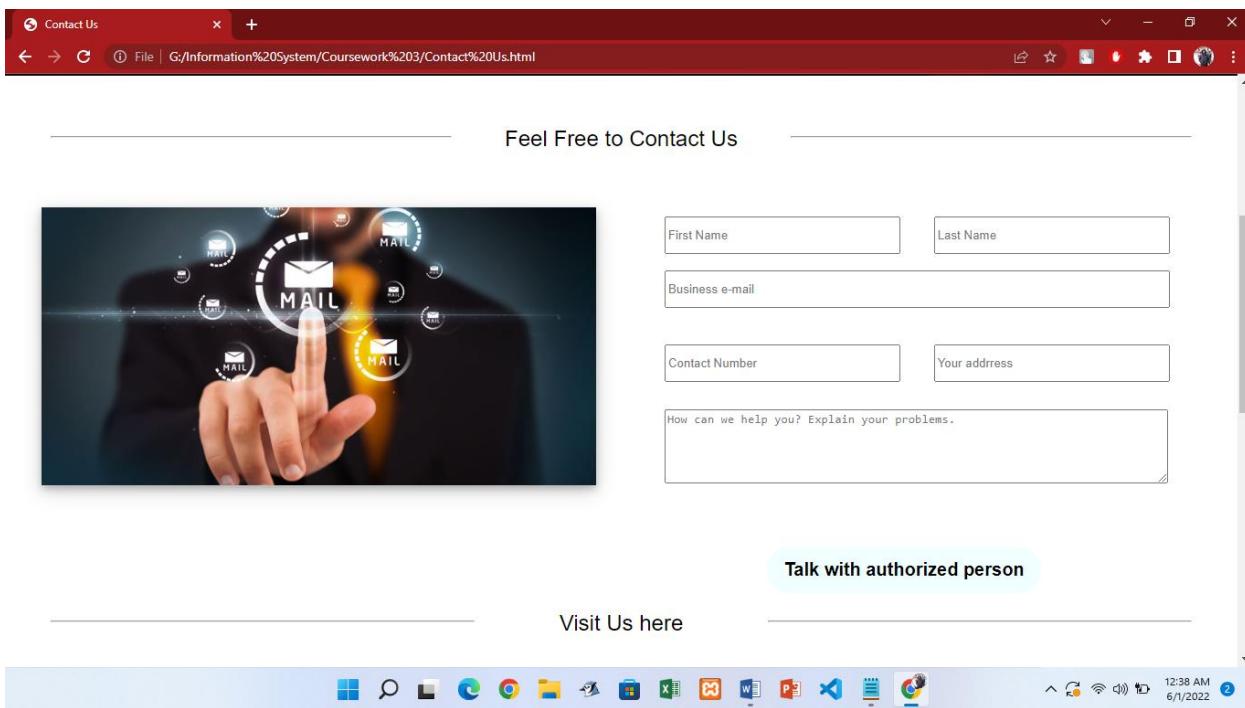

Figure 47: Screenshot of the Contact us page

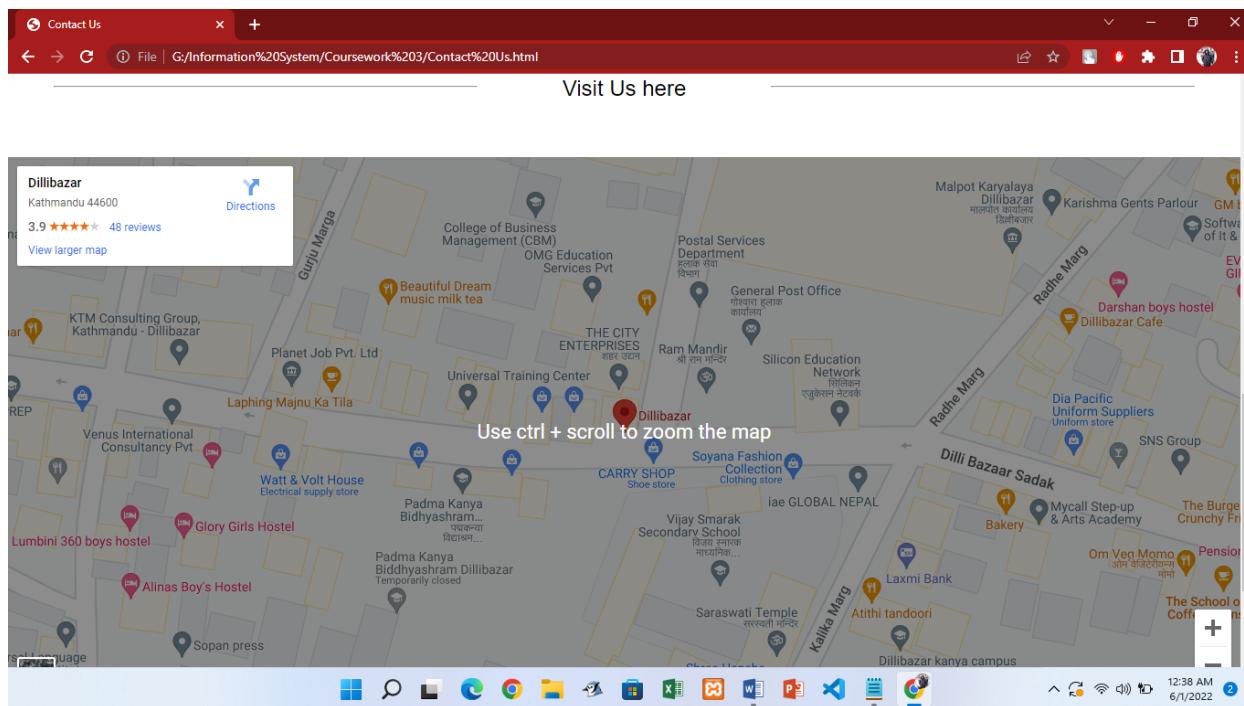

Figure 48: Screenshot of the Contact us page

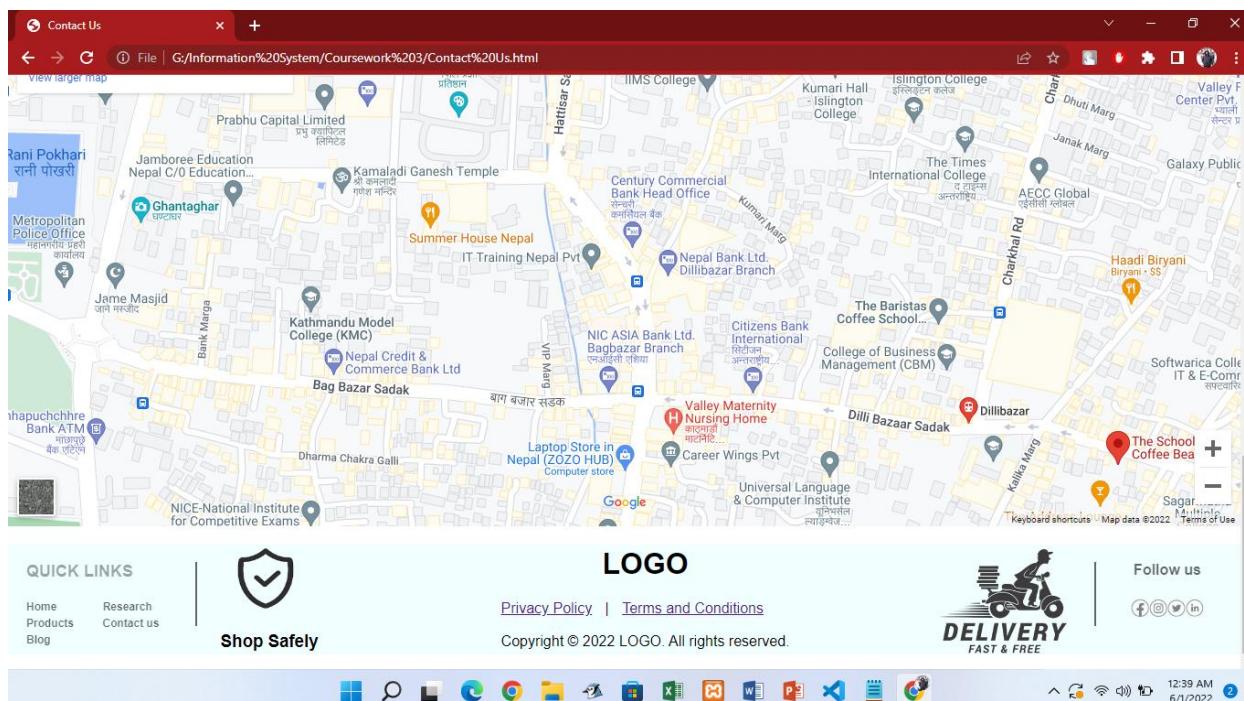

Figure 49: Screenshot of the Contact us page

5. Testing:

5.1. Image Slider on Research page (JavaScript)

Objective	To move/slide images one by another using JavaScript.
Action	Go to the Research page and see the image on the top of the table.
Expected Result	Images will be slid one by another.
Actual Result	Images have been slid one by another.
Conclusion	The test was successful.

Table 1: Test 1

5.2. Screenshots of test one:

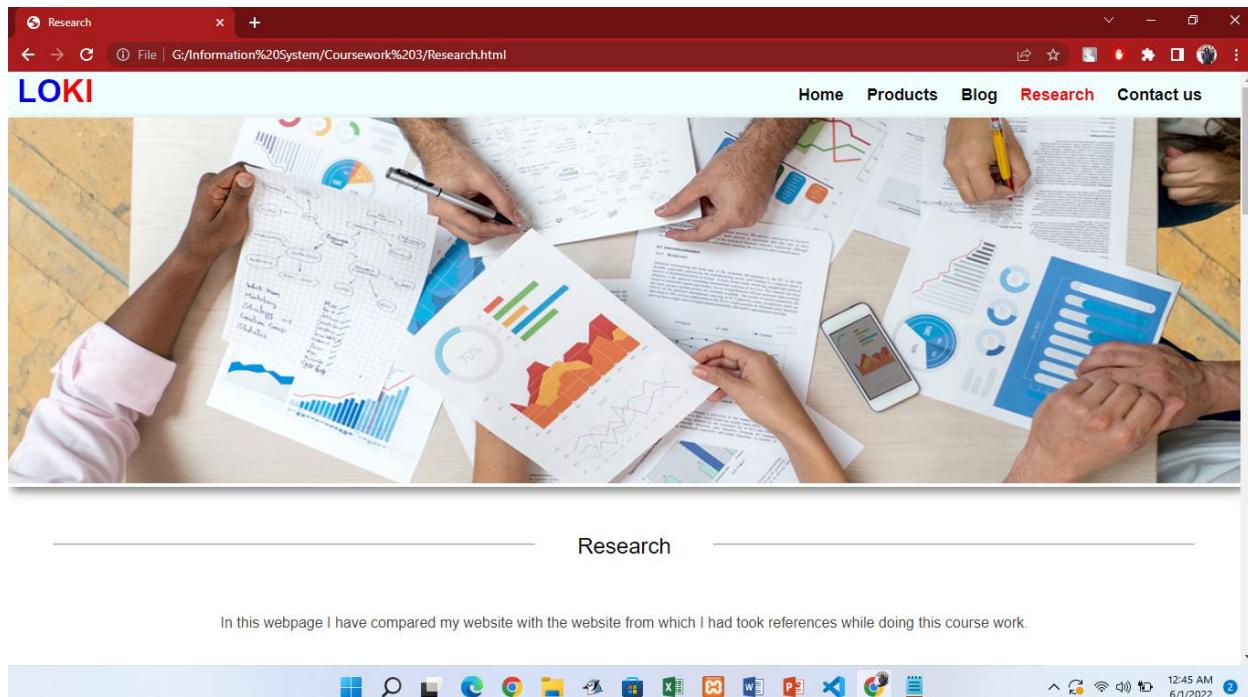

Figure 50: Before image slides

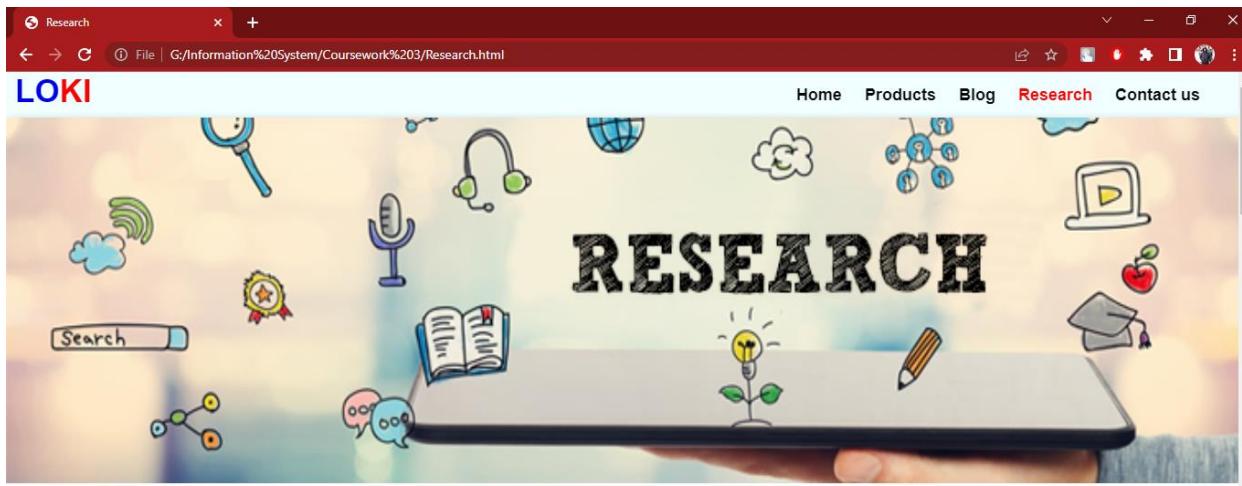

Figure 51: After image slides

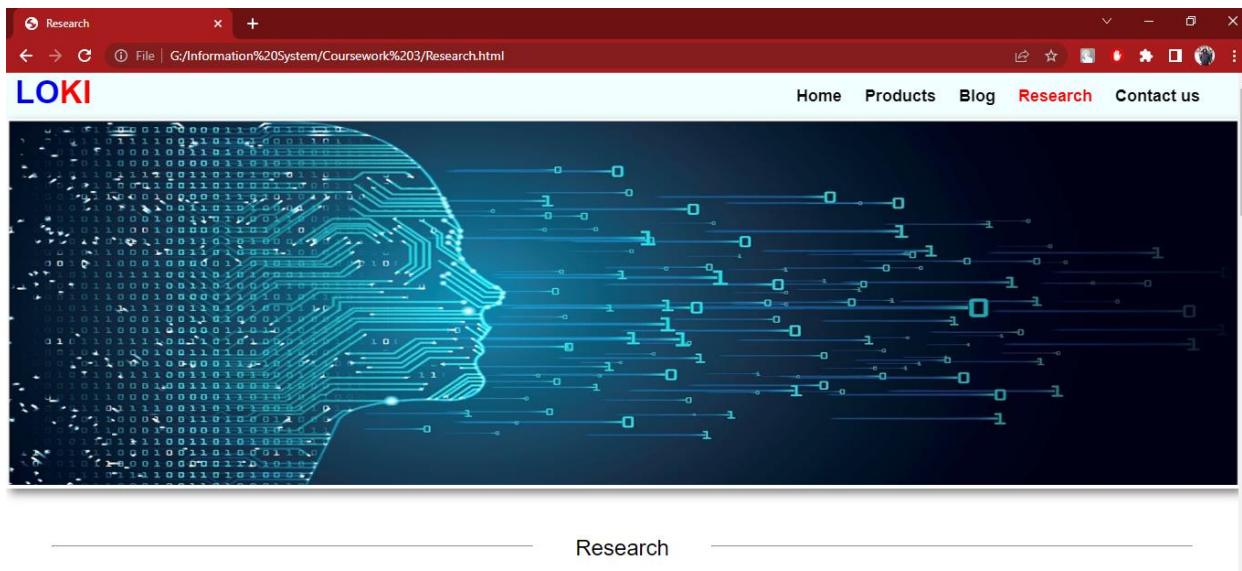

Figure 52: Another image slide

5.3. Form Validation in the contact us page(JavaScript)

Objective	To validate the form.
Action	Go to the Contact Us page and fill the given form missing first box.
Expected Result	An alert box will appear with the message that First Name is required.
Actual Result	An alert box has appeared with the message that First Name is required.
Conclusion	The test was successful.

Table 2: Test 2

5.4. Screenshots of test two:

Feel Free to Contact Us

First Name

Last Name

Business e-mail

Contact Number

Your address

How can we help you? Explain your problems.

Talk with authorized person

Visit Us here

Figure 53: Before filling form

The screenshot shows a web browser window with the title "Contact Us". The URL in the address bar is "File | G:/Information%20System/Coursework%203/Contact%20Us.html". The page content includes a header "Feel Free to Contact Us" above a form. The form contains several input fields:

- First Name: Ghimire
- Email: shishirghimire027@gmail.com
- Phone: 077-420270
- Message: Arghakhanchi
- Question: How long do I have to wait to receive my order?

A large image of a hand pointing at a screen with multiple "MAIL" icons is displayed on the left side of the form.

Figure 54: After filling form

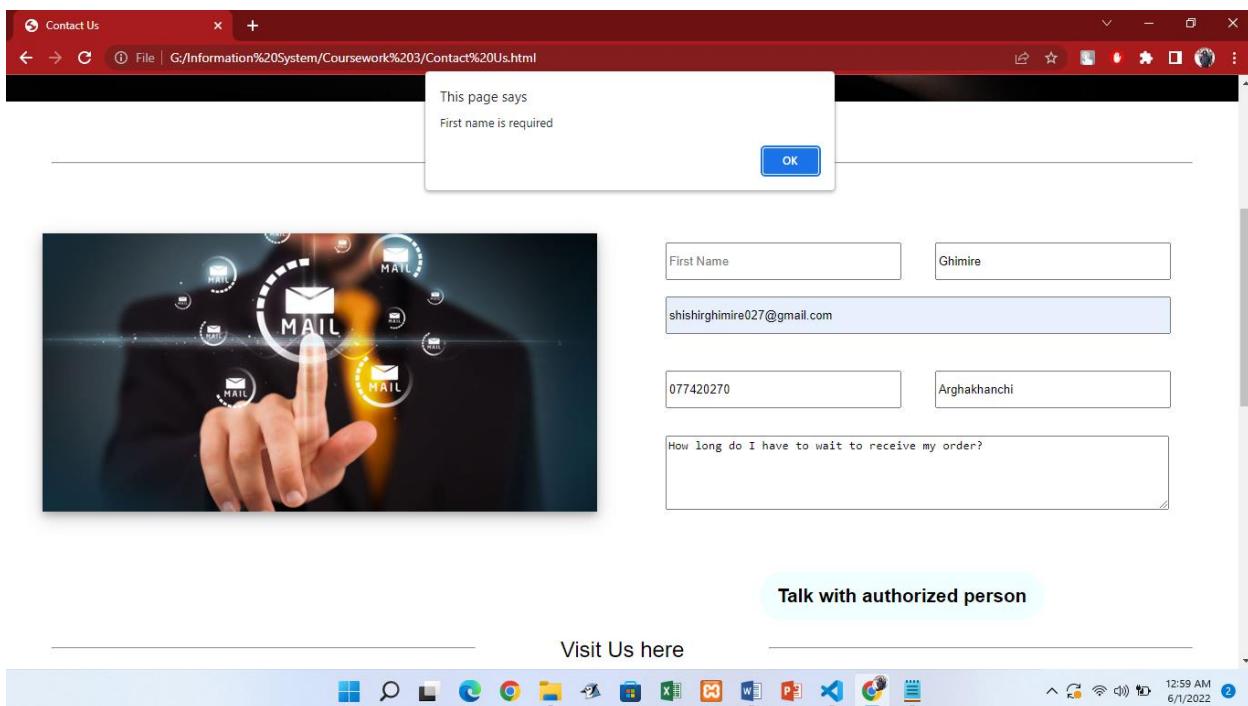

Figure 55: Alert box

5.5. Onclick return to product section from buying section (JavaScript)

Objective	To return the interface to the product section from buying section.
Action	Go to the Buy now page click on the red button at the top.
Expected Result	The user will return to the product page from the buy now page.
Actual Result	The user has been returned to the product page from the buy now page.
Conclusion	The test was successful.

Table 3: Test 3

5.6. Screenshots of test three:

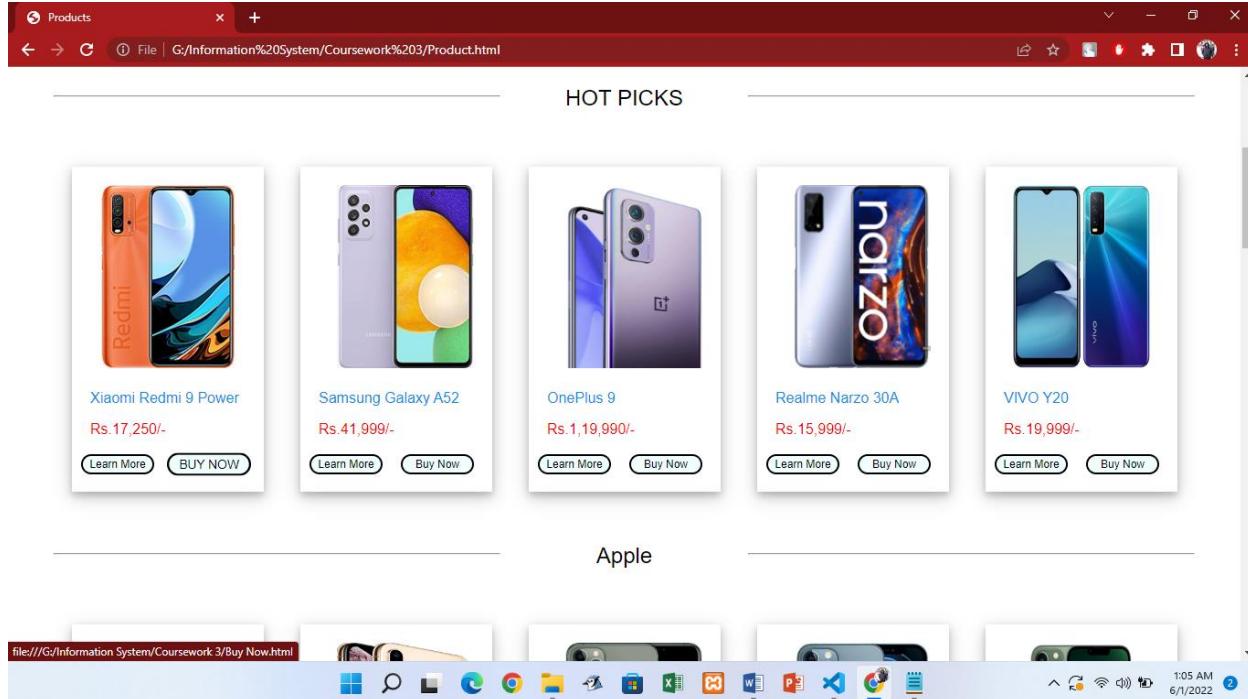

Figure 56: Clicking into buy now button

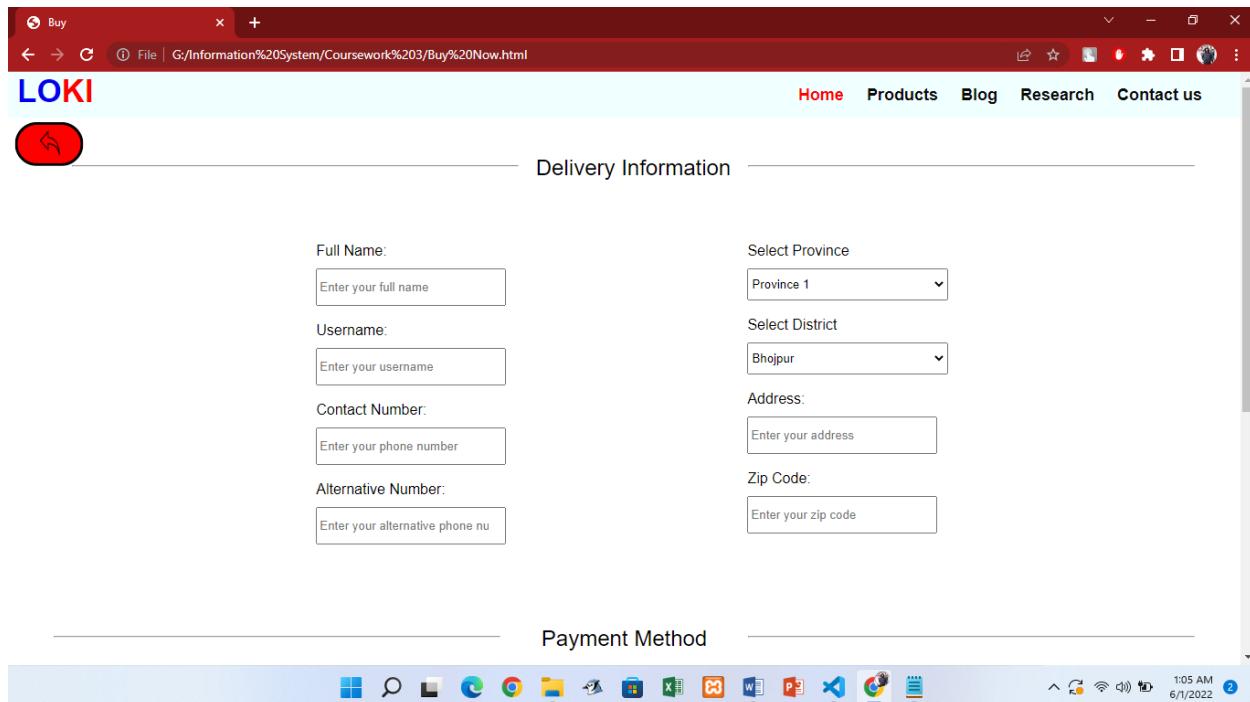

Figure 57: Clicking the return button

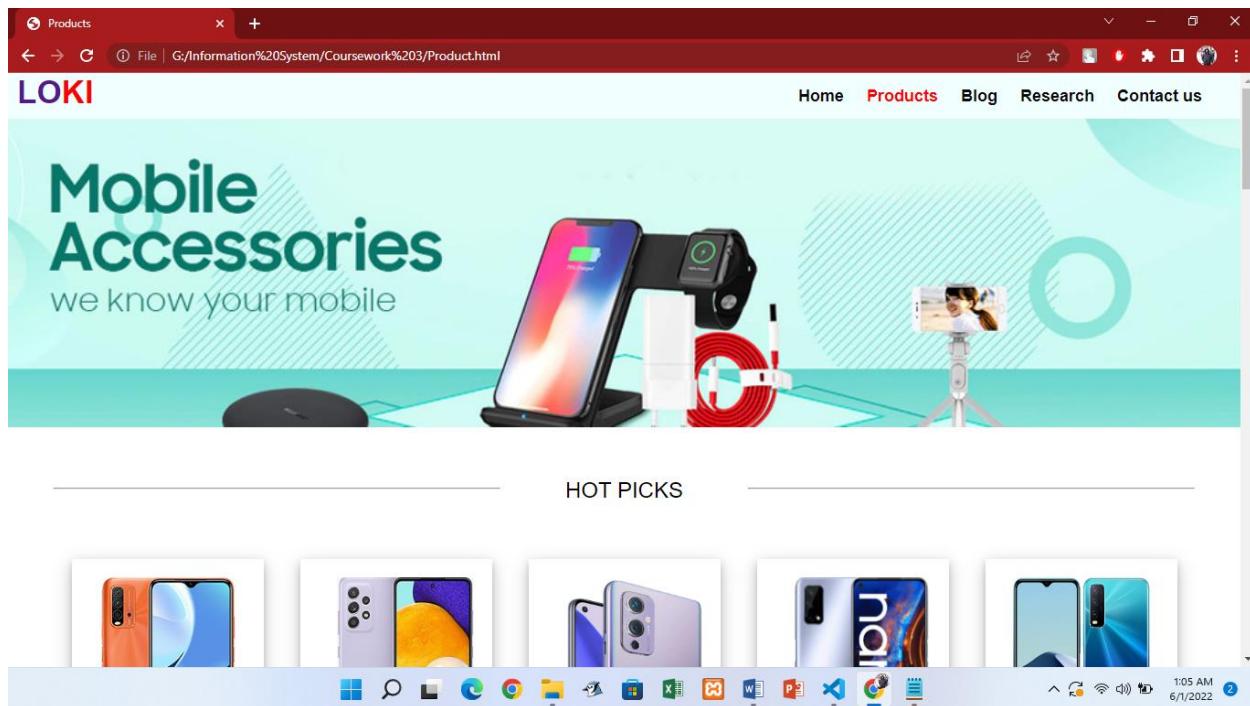

Figure 58: Back to product page

5.7. Nav Hover effect:

Objective	To change the color of any option in the navigation bar.
Action	Go to the navigation bar and hover any of the option.
Expected Result	The product in the navigation bar color will be changed from black to red.
Actual Result	The product in the navigation bar color has been changed from black to red.
Conclusion	The test was successful.

Table 4: Test 4

5.8. Screenshot of test four:

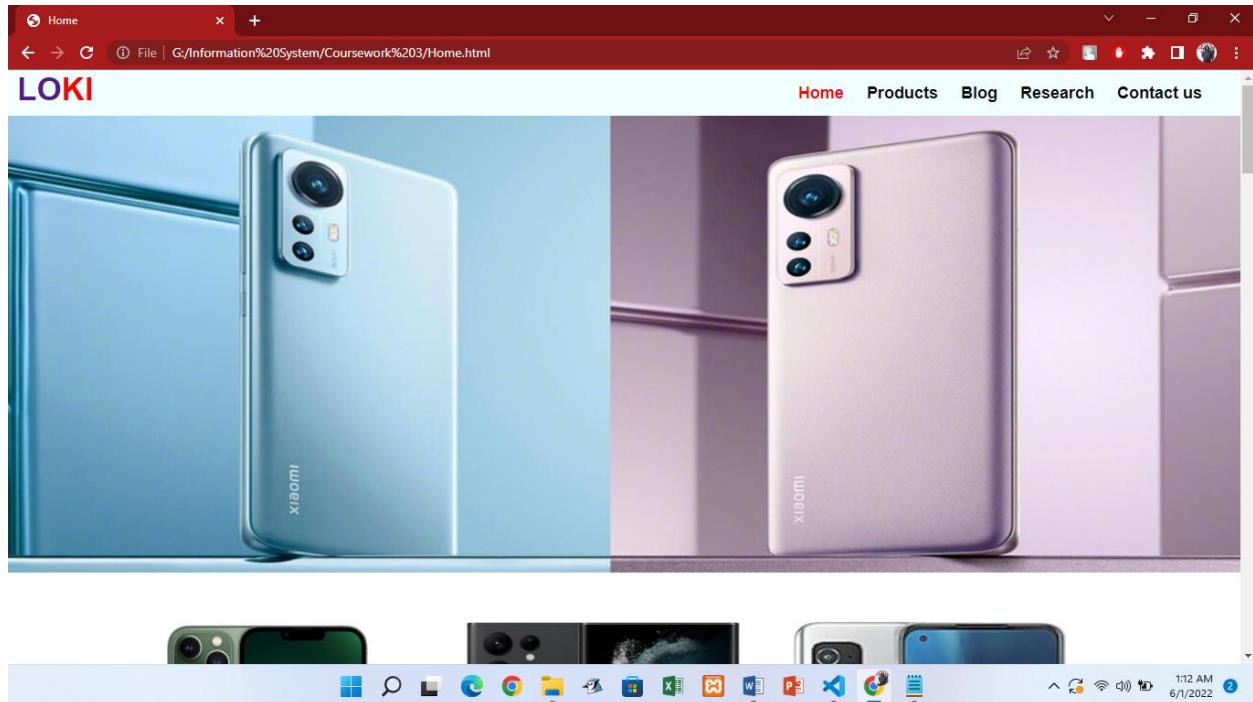

Figure 59: Before the over effect

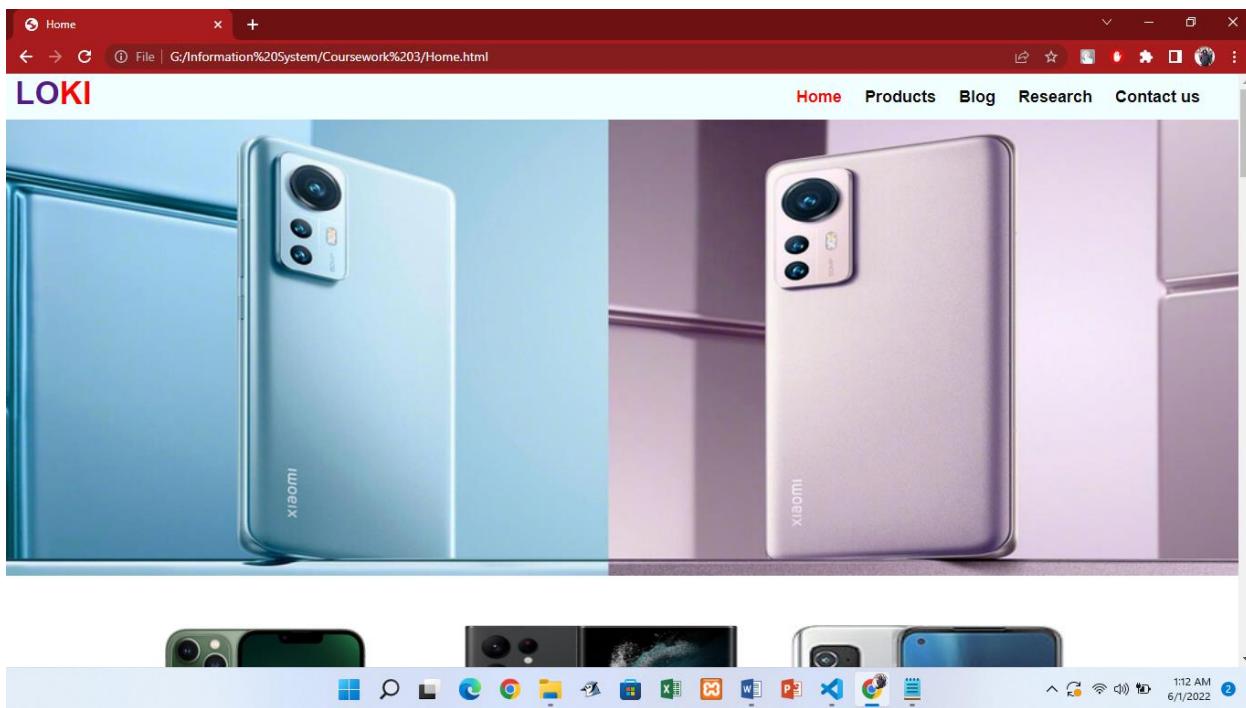

Figure 60: After the hover effect

5.9. Internal + External Link test:

(Internal)

Objective	To change the webpage by clicking on any of the options from the navigation bar.
Action	Click any option from the navigation bar.
Expected Result	The webpage will be changed.
Actual Result	The webpage has been successfully changed.
Conclusion	The test was successful.

(External)

Objective	To re-direct the webpage to any of the social media by clicking on quick links of social media in the footer section.
Action	Click any of the social media options in the footer section.
Expected Result	The webpage will be directed to social media.
Actual Result	The webpage has been directed to social media.
Conclusion	The test was successful.

5.10. Screenshots of test five:

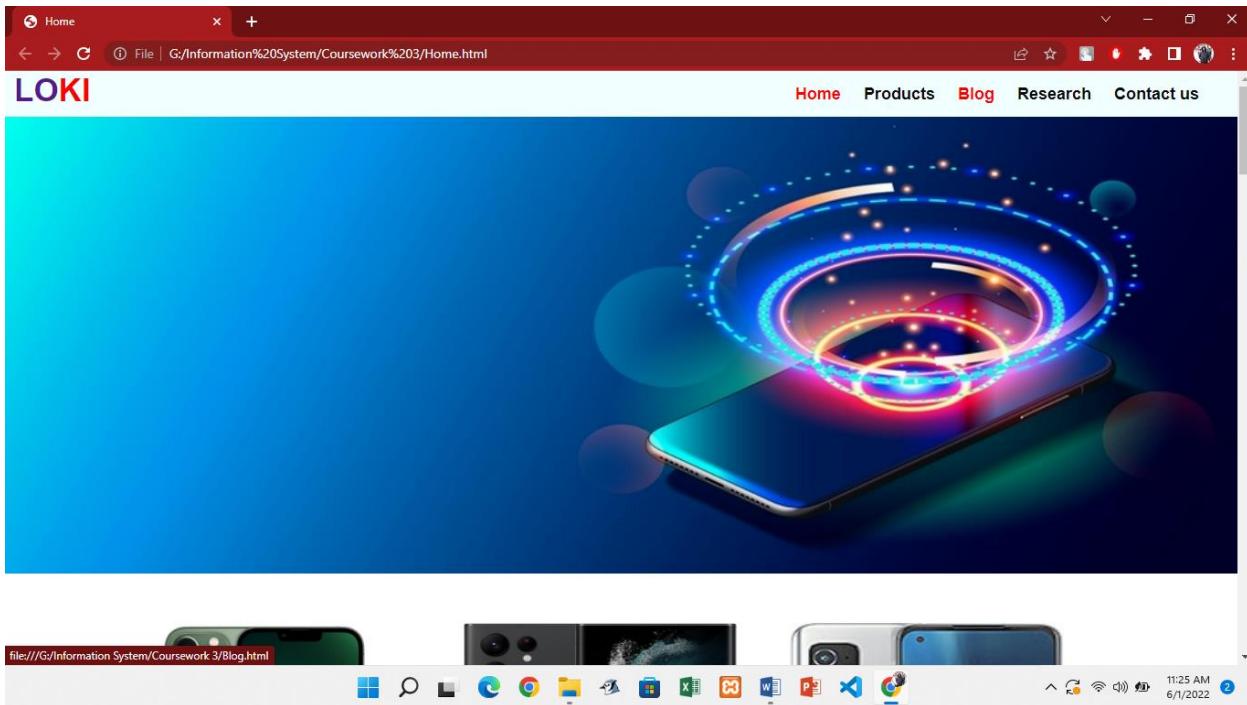

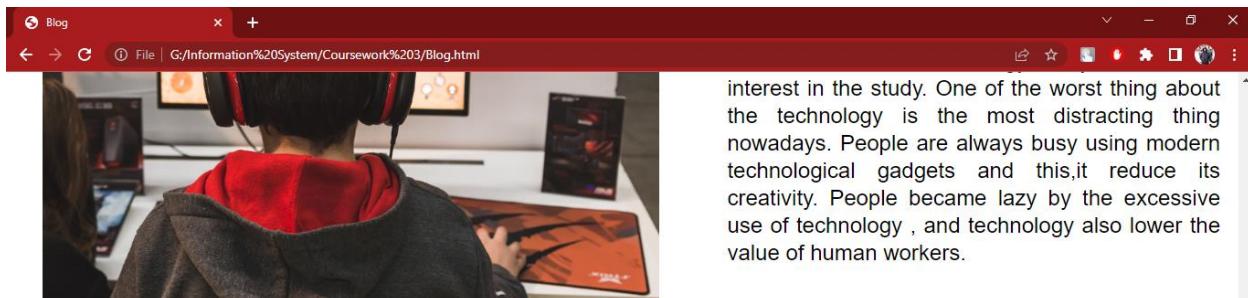

Figure 61: Hovering on the Blog option in nav bar

Figure 62: After clicking the blog option

Conclusion

To sum up, I believe that the positive or negative effect of technology on world depends on the choices that people make.However,technology is a good servant but a bad master. Technology thus means the knowledge which enhances lives.Several big and small things we do day-to day lives have been the outcome of technological development.

Figure 63: Before clicking on the social media option

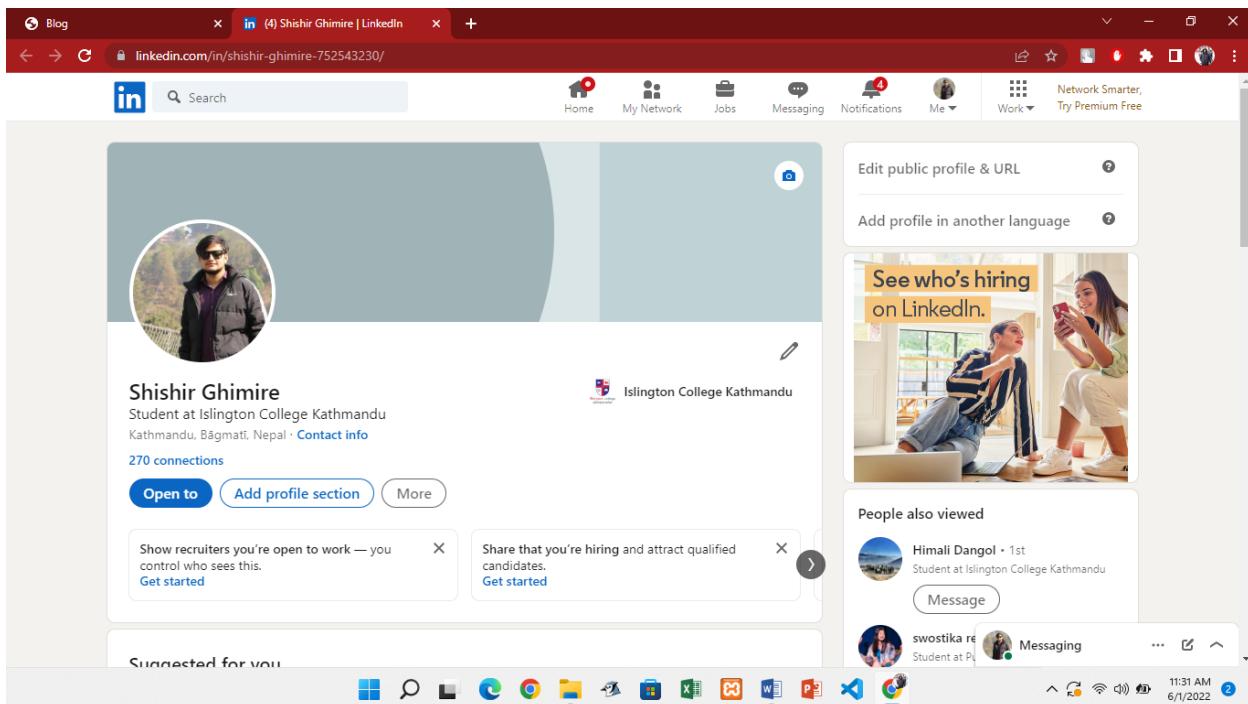

Figure 64: After clicking on the social media option

6. Conclusion:

The coursework given was the third coursework of this module. While completing this coursework I had to face lots of difficulties like not having enough time and my poor time management schedule was not working at all but as a whole, it was quite fun to work on it. During coding someplace, I was really confused and didn't know how to carry out that task but researching the matter helped me to overcome the confusion. I learned that web development doesn't only requires hard work but also requires creativity. Creativity, dedication, and a lot of hard work were put together to complete this task. This project improved my research skills and I am very optimistic that it will help me to make my future better.

I had to research lots of things during the coding part of my coursework. This includes JavaScript and CSS. Before this coursework, I was very confused about JavaScript and I had no experience with how to carry out certain things before. I learned how to validate forms and develop an image slider with the help of JavaScript. I learned how to style my web pages to make them more attractive. I took help from different websites and watched countless hours of tutorial videos on YouTube to complete my coursework. Doing this coursework made me understand HTML, CSS, and JavaScript more clearly. Doing this coursework regularly helped to write code more efficiently. I learned how to manage time and making wireframes before developing a website helped me to learn how important is it to plan properly before carrying out certain tasks.
